The page features decorative vertical borders on both the left and right sides. These borders consist of horizontal stripes of various colors, including shades of green, teal, blue, purple, orange, and light blue, rendered in a soft, watercolor style. The central area of the page is plain white.

# GETTING STARTED

# INTRODUCTION

Whether or not you call yourself an artist, you are one—creativity is an inherent human trait. It may look different from person to person, but the capacity for artistic expression is in each of us. Sometimes it just needs a little push—and the permission to explore.

Nothing is perfect, and watercolor paint truly reflects this beautiful reality. Watercolor's light and airy quality uniquely sets it apart from other types of paint. This fluid medium requires some practice to master, but you don't need to have any experience to get started. If you can hold a paintbrush, you can learn how to paint gorgeous, modern watercolor artwork!

In the pages of this book you'll discover the essential tools of the trade, basic brushstrokes, beginner painting and color mixing techniques, and simple tutorials that show you how to paint everything from shapes and patterns to fresh botanicals and abstract landscapes. With a few brushstrokes, you can quickly capture the essence of any subject.

Whether watercolor painting is a hobby, a new creative entrepreneurial venture, or just a way to play, as you work your way through this book you will learn the basics to build upon as you develop your creative skills and revive your inner artist.

So pick up your brush, and let's get started!

# SUPPLIES

The supplies you use are very important. The higher the quality of your supplies, the easier it will be to paint without frustration and create the look you want. The tools and materials listed here will help you get started in your journey as a watercolor artist.

**BRUSHES** The ideal brush holds water well, maintains a fine point, distributes paint easily, and returns to its shape after use.

The hair on watercolor brushes can be animal (typically sable), synthetic, or a mixture. Sable is the highest quality and performs the best; therefore, it can be expensive. Synthetic bristles are made to mimic the qualities of sable and provide a more affordable option. A combination brush contains sable and synthetic hairs to increase the performance that synthetic lacks, while still providing affordability.

Brushes come in a range of sizes. The lower numbers (0, 2, 4, etc.) have smaller bodies, and the higher numbers (12, 14, 16, etc.) have larger bodies. The size(s) you choose will depend on the scale of your painting.

Round brushes are the most commonly used brush for watercolor, because of the wide variety of ways in which they can be utilized.

Use flat brushes to create sharp lines, geometric shapes, and paint large surface areas.

Use thin, long brushes for small details, long lines, and script.

**PAINT** Watercolor paint consists of two main ingredients: gum arabic (the binder) and powdered pigment (the color). Student-grade paint contains cheaper pigment and more fillers, while artist-quality paint contains superfine pigment with high permanence.

Student-grade paints are great to start with, especially if you're new to watercolor and want to practice. However, many beginners become frustrated working with student-grade paints because they can't produce highly pigmented colors, the flow is restrictive, and they fade in direct light. Aim to get the highest-quality paints you can afford, even if you buy them slowly over time. I promise you won't regret it!

### TUBES VS. PANS

Pans are more often available in student-grade quality. You can find artist-quality pans, but most professional artists use pans for painting outdoors and while traveling.

Tubes are my preferred form of watercolor. Artist-quality tubes contain plenty of paint that will last a decent amount of time—in my opinion, they are also easier to use.

**PALETTE** If you're working with tube paints, you'll also need a palette. Fill each well with individual colors of paint. Keep similar colors next to each other for ease of use.

**PAPER** The most important thing to understand about paper is the weight. Regular printer paper will cave and buckle if water is applied. Thick watercolor paper with enough weight can hold water without buckling. The standard weight for watercolor paper is 140-lb.

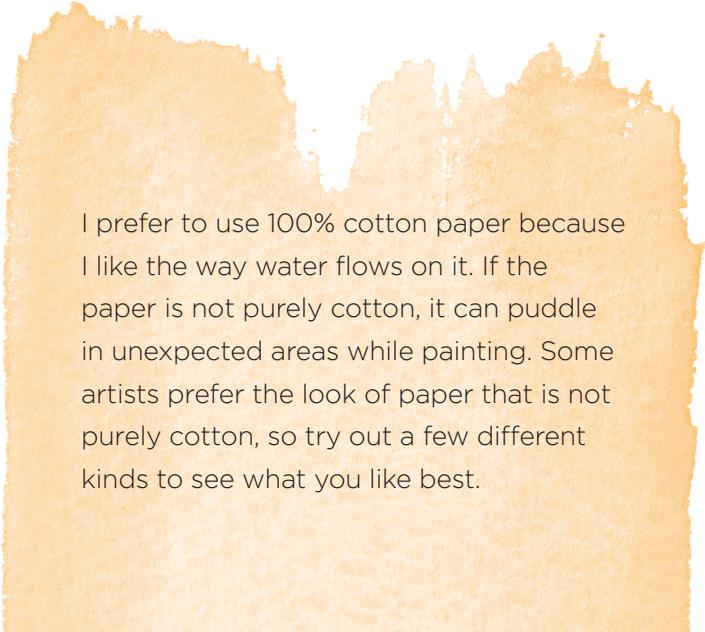

Watercolor paper is available cold-pressed (textured), hot-pressed (smooth), and rough. Cold-pressed paper has ridges and texture, which allow the paper to hold more water and keep it in place. Hot-pressed paper is smooth and non-textured, requiring less water for paint to flow easily. I use cold-pressed paper most frequently, because I love the texture it provides while handling lots of water. I occasionally like to use hot-pressed paper for watercolor lettering and illustrations.

**HOT-PRESSED PAPER**

**COLD-PRESSED PAPER**

**ROUGH PAPER**

I prefer to use 100% cotton paper because I like the way water flows on it. If the paper is not purely cotton, it can puddle in unexpected areas while painting. Some artists prefer the look of paper that is not purely cotton, so try out a few different kinds to see what you like best.

**MISCELLANEOUS SUPPLIES** Before you begin painting, gather these other useful materials.

**WATER** I like to use a water container that has two separate sides, so I can rinse cool colors in one half and warm colors in the other half. That way the hues won't mix.

**MASKING FLUID** Masking fluid protects the white of the paper from watercolor paint. You can use it to protect areas of your painting or bare paper where you don't want paint to go.

**PAPER TOWELS** Paper towels are useful not only for cleaning up your workspace and brushes, but for creating interesting texture in your watercolor paintings.

**MASKING TAPE** Masking tape is a great tool to have on hand for creating crisp lines while you're painting. Like masking fluid, the tape protects the paper, or dry paint on the paper, from wet watercolor paint.

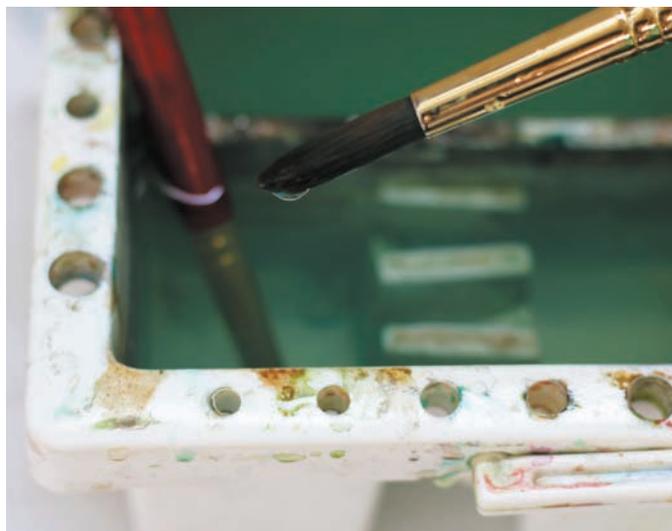

# PAINTING BASICS

Follow these tips and techniques as you explore watercolor painting. Even if you've never painted before, with a bit of practice, you'll soon find yourself becoming more comfortable with this fun and beautiful medium!

## LOADING THE BRUSH WITH WATER

**PERFECT** To fill the brush with just the right amount of water for painting, rest the bristles quickly on a paper towel after dipping in water.

**TOO WET** When you simply dip a paintbrush into your water container, it holds a great deal of water. While it is too much water for painting with, this amount of water is useful for diluting paint for lighter washes over larger areas of paper.

**TOO DRY** If you dry the brush too much on the paper towel, it may be too dry for regular painting. A “too dry” brush can be used for creating textures and intricate details, however.

## LOADING THE BRUSH WITH PAINT

When loading your brush with paint, you want to have the “perfect” amount of water on the bristles. (See page 14.) Dip the paintbrush into the color you want, and use the palette to mix paint and apply more water if needed.

If the paint is very thick, it won't flow as smoothly on the palette. For looser paint flow, dip the paintbrush in water and add it to the color to thin.

A medium amount of paint will have just the right amount of flow, without the pigment being too watered down.

Very watered-down pigment will have lots of flow and will puddle on the palette.

If the paint on your palette is too watered down, add more paint. If it's too thick, add more water. Play around with the consistency until you find what best fits your needs and style.

# TECHNIQUES

You can achieve a wide range of looks and textures with watercolor paint. Practice the following techniques to get comfortable with your paints and brushes, and refer to this section as you begin painting if you need a refresher on how to create the look you want.

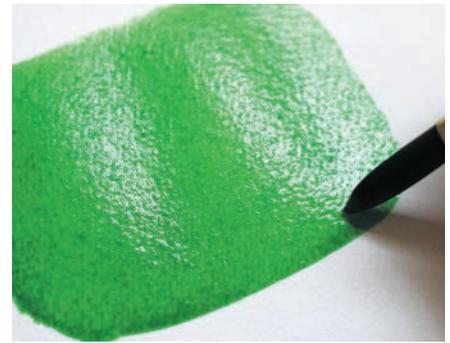

## FLAT WASH

Paint the area with plain water.

Apply color evenly, allowing it to spread across the wet paper.

Avoid interfering with the wash, so that it maintains the flat appearance as it dries.

## GRADATED WASH

Paint the area with plain water.

Apply a heavy amount of pigment to the brush, and place it at the edge of the wet area of paper.

Allow the paint to gradually spread through the wet area so that the color is dark on one side and gets lighter as it spreads.

## VARIEGATED WASH

Paint the area with plain water.

Add random drops of one color, leaving white space between.

Add drops of another color in the white space, allowing some blending, but ultimately keep the colors true.

**WET-ON-DRY** This is the most basic technique. Take a brush loaded with paint, and paint directly on a dry piece of paper.

**DRY BRUSH** Dry a wetted brush with a paper towel before dipping it into slightly diluted paint. Apply paint to the paper, letting the dryness create lots of texture.

**GLAZING** Apply a layer of solid watercolor. Let dry completely, add then paint another color on top of it. This technique allows you to layer watercolor paint without the colors bleeding together.

### WET-ON-WET

Paint an area with solid color.

While the paint is still very wet, drop in another color with a good amount of water.

Allow the paints to bleed together, while still maintaining their true colors.

### DRY-ON-WET

Paint an area with solid color.

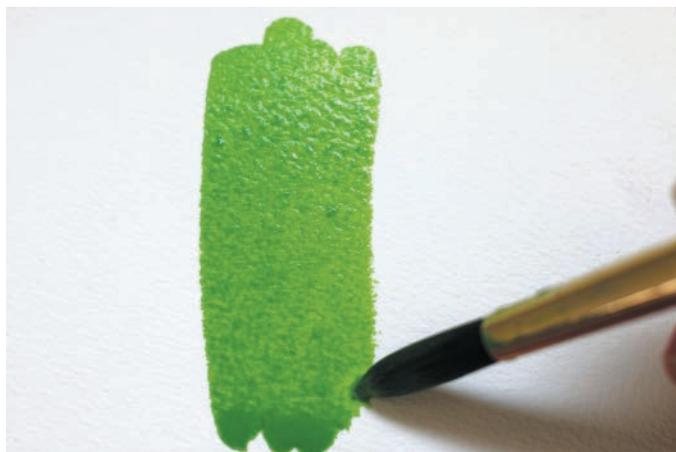

While the paint is still glistening wet, drop in another color with a dry brush.

The color will bleed some, but for the most part it will stay where you drop it and develop fuzzy edges.

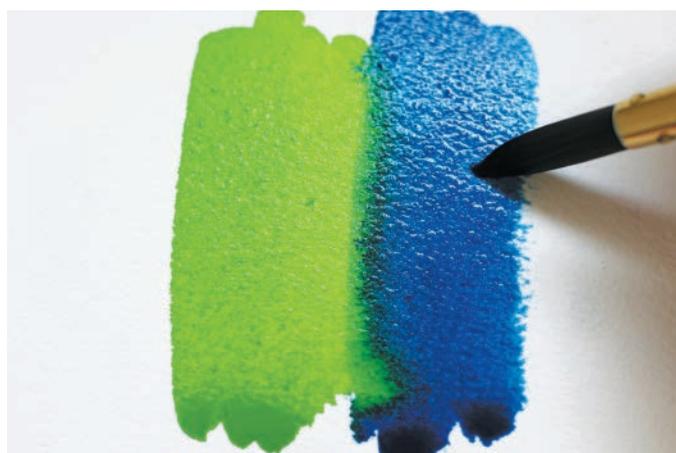

## BLENDING

Paint an area with solid color.

While the paint is still very wet, apply a different color right next to the first, allowing the edges to touch.

This technique allows the paints to bleed into each other and mix where they meet to create a new color.

## PRESSURE & LIFTING

With a fully loaded brush, apply pressure to the body of the bristles on the paper.

Using a quick sweeping motion, lift at the end.

You can apply pressure and lifting as one technique, or you can use each step as individual painting techniques.

## HARD & SOFT EDGES

Paint an area with watercolor paint. If you let the paint dry in this stage, the edges are “hard.”

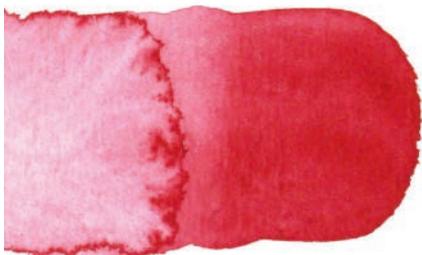

For “soft edges,” apply water to the edge until it blends more naturally.

The result is a subtle gradation of color that increasingly gets lighter as it moves out.

## BACKRUNS

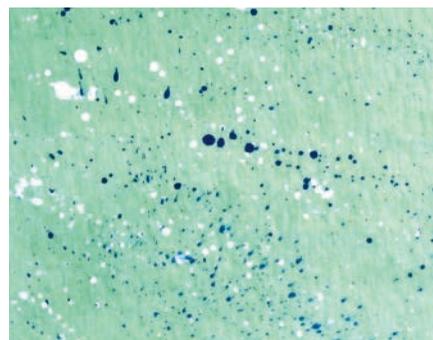

Backruns, or “blooms,” create interest within washes by leaving behind flower-shaped edges where a wet wash meets a damp wash. First stroke a wash onto your paper. Let the wash settle for a minute or so, and then stroke another wash within (or add a drop of pure water).

## TILTING

To pull colors into each other, apply two washes side by side and tilt the paper while wet so one flows into the next. This creates interesting drips and irregular edges.

## SPATTERING

First cover any area you don't want to spatter with a sheet of paper. Load your brush with a wet wash and tap the brush over a finger to fling droplets of paint onto the paper. You can also load your brush and then run the tip of a finger over the bristles to create a spray.

# REMOVING PAINT

Although you cannot completely “erase” paint from the page, there are a couple of techniques you can use to remove paint while it is still wet.

## PAPER TOWEL

Begin by painting an area with watercolor.

Dab a piece of paper towel lightly over the area to remove some color.

The paper towel absorbs some, but not all, of the color.

## PAINBRUSH

You can also sweep a dry paintbrush over the painted area.

The paintbrush doesn't pick up quite as much pigment as the paper towel, leaving behind a softer, more subtle area of lifted color.

You can use these techniques to try to correct mistakes, but they are also great tools to use as part of your painting process to create interest and texture in your artwork!

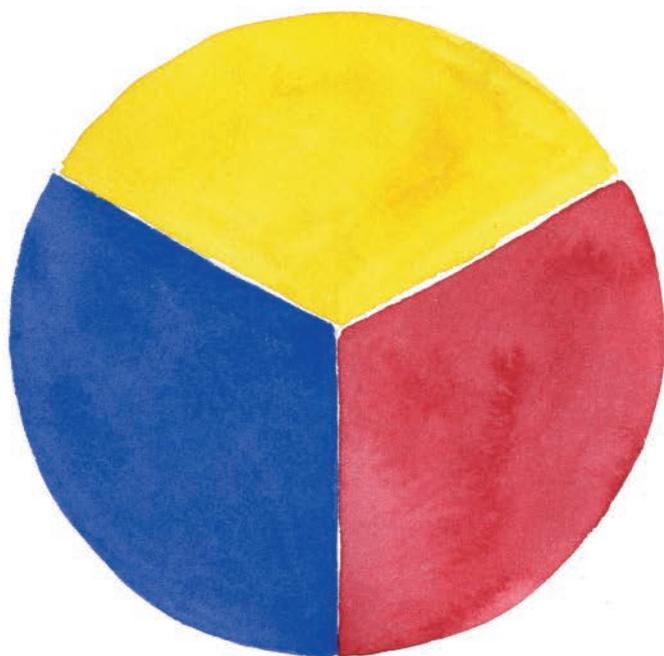

The page features decorative vertical borders on both the left and right sides. These borders consist of horizontal stripes of various colors, including shades of green, teal, blue, orange, and purple, rendered in a soft, watercolor style. The central area of the page is plain white.

# EXPLORING COLOR

# COLOR THEORY

Color theory is the guide by which color is mixed and organized. The color wheel is the traditional structure for organizing color into three categories: primary, secondary, and tertiary.

**PRIMARY** The primary colors are red, yellow, and blue. These three colors cannot be created by mixing other colors. All other colors are a result of blending primary colors.

**SECONDARY** The secondary colors are green, orange, and purple. These colors are created by mixing two primary colors. Yellow + Blue = Green. Red + Yellow = Orange. Blue + Red = Purple.

**TERTIARY** The tertiary colors are yellow-orange, red-orange, red-purple, blue-purple, blue-green, and yellow-green. These colors are formed by combining a secondary color with a primary color. For example: Yellow + Green = Yellow-Green.

## COLOR HARMONY

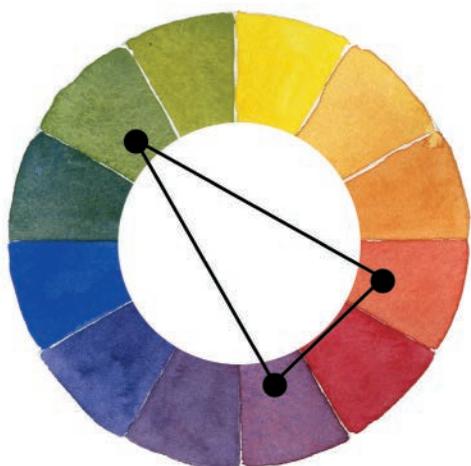

Color harmony refers to color arrangements that are pleasing to the eye and make sense visually and artistically. When colors are used in harmony, they create balance and interest. When colors are used out of harmony, the result is visually confusing and chaotic. Your goal is to create art, using hues from the color wheel, that visually makes sense and is interesting.

**COMPLEMENTARY** A complementary color scheme creates high contrast. While creating a very vibrant look, they must be used well to avoid overstimulation and chaos. For example, red and green are complementary, but using a softer value of red in a painting that uses this color scheme will avoid visual confusion.

**ANALOGOUS** Analogous colors are any three colors that are side by side on the color wheel. For example: yellow, yellow-orange, and orange. Colors next to each other on the color wheel blend easily together, so they make sense to the brain. One color usually dominates.

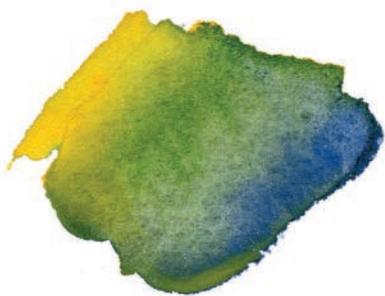

**SPLIT-COMPLEMENTARY** This is an adaptation of the complementary color scheme. The use of these colors produces high contrast with less conflict. For example: green, red-purple, and red-orange.

**TRIADIC** An arrangement of triadic colors creates high contrast, even when using lighter color values. This combination is very vibrant, and usually one color dominates while the other two support.

# COLOR MIXING

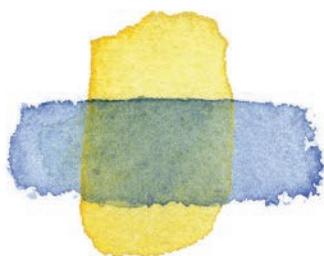

Color mixing is the process of combining colors to create a new color. Learning to mix your colors to create the right hue is an important skill you'll use for every project. There are three ways you can mix color: on the paper, on the palette, and by glazing.

**PAPER** If you're okay with the primary colors not being completely blended, you can mix colors right on watercolor paper. Typically, this approach isn't completely even. In this example I have mixed green, but note how some places look more yellow or blue.

**PALETTE** To create even and consistent color, mix colors on your palette before dropping them onto the paper. With this technique, you can completely control the color balance before applying to paper.

**GLAZING** Glazing is a method of applying layers of watercolor over each other. This is a great way to create the color you want, but also add dimension with glimpses of the colors underneath.

## COLOR MIXING CHART

It's important to not only know how to mix other colors from primary colors, but to also know how to mix the specific paint colors on your palette. Most watercolor artists have a wide variety of colors on their palette, not just the primaries. It's very valuable to make a chart of all the different hue combinations your paints can create. This is my most used tool, and I refer to it daily. Follow these tips to create your own.

Using a ruler, chart and draw squares based on the number of paints you will use in your chart. I used 8 colors, which makes 64 squares. Then write the names of the colors you will be using along the left side and the top in the same order.

The middle diagonal line is the "pure color," where the name of the paint is the same on the side and top. I paint this row first.

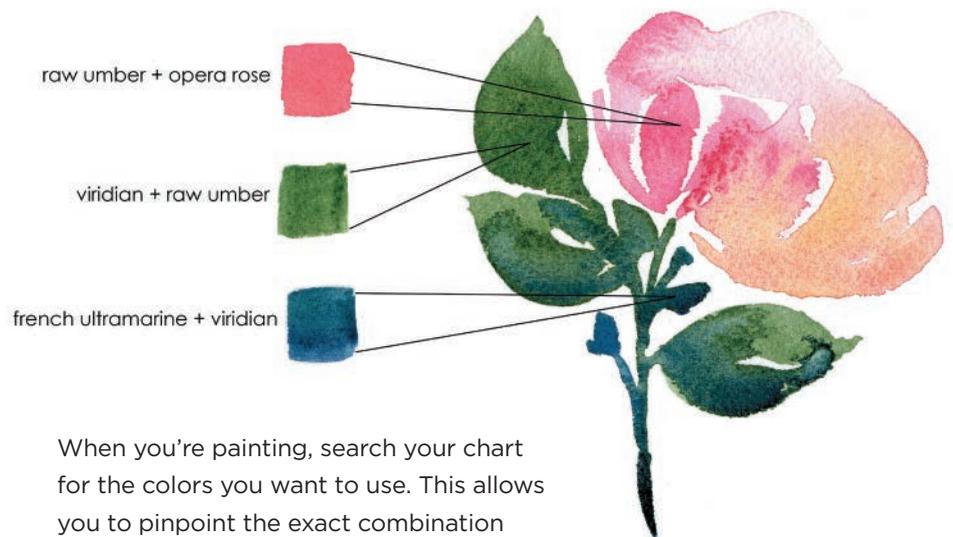

There will be two places on the chart where the same color combination meets. Remember: the color listed on the left is the dominant color. Use that color as the base, and add a little of the color listed at the top to create the hue for each square.

I like to mix both color combos at the same time to save paint. For example: When the dominant color is opera rose and the additive color is viridian, I add a little viridian to opera rose on my palette and then place that color in its square. Next I take that paint mixture and add viridian until it becomes the dominant color, and then drop that color into its square.

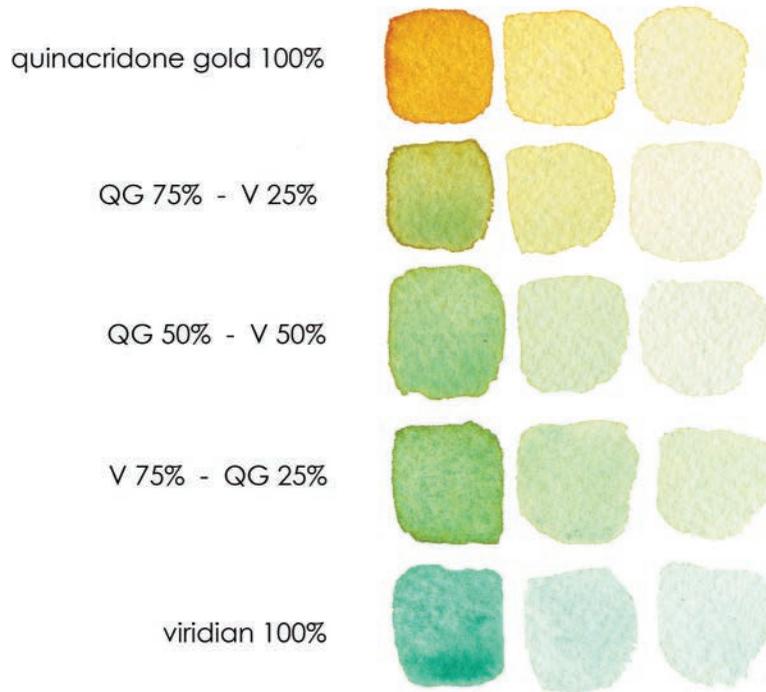

Isn't the chart amazing? You can see all the different colors that can be created with your palette, and you may even find some combinations that pleasantly surprise you!

When you're painting, search your chart for the colors you want to use. This allows you to pinpoint the exact combination quickly, without wasting paint in the effort to achieve it. I refer to my color chart daily to help me mix the perfect hues.

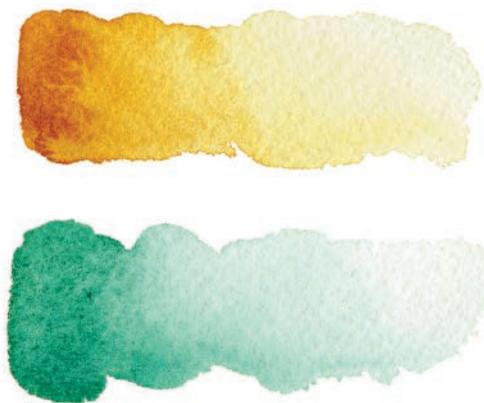

To explore the color variations within a combo, as well as their value, create a smaller mixing chart. Paint the top and bottom rows with 100% unmixed color, the middle row with a 50/50 mix, and the other two rows with more of the pure color each row is closest to.

Example: Place quinacridone gold at the top and viridian at the bottom. Mix both together to create an even mixture for the middle row. For the row closest to quinacridone gold, add more yellow. For the row closest to viridian, add more green. Add water to the colors to create the lighter values in the chart.

## VALUE

*Value* is the relative lightness or darkness of a color. To make a color value lighter, add water. To make a color value darker, add pigment.

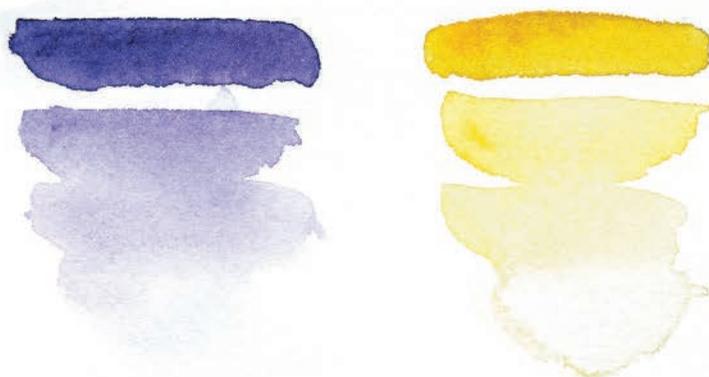

To help determine the value of a color, compare it to the grayscale. The grayscale helps you determine which shade is closest in value to your color. For example, yellow matches up with the lighter values of gray, and purple matches up with the darker values. When painting, values are an important part of making the overall piece make sense.

There are five basic values: dark, medium-dark, medium, medium-light, and light. Values are easier to see in grayscale. It's important to train your eye to see the values in color so that your paintings look accurate.

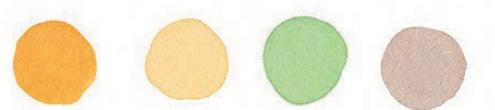

You can change the value of a color by either lightening it with water or darkening it with pigment.

To understand grayscale and value better, let's compare a picture in full color and black and white. Converting a picture to black and white allows you to better see the light, medium, and dark values.

In this example, I show how layering different shades of gray helps me see the color values in the picture on page 32. I know where both the darker shades and the bright, almost-white shades are. This is so helpful before painting this piece in color, because I can better visualize where the dark color values are.

# PAINTING IN BLACK & WHITE

Painting in black and white not only helps you practice and learn how to understand color values, but it also creates a pretty, monochrome aesthetic.

Using different values of black, I can create a monochrome painting with depth and dimension.

## HELPFUL TIPS

Use your new color mixing skills to create black by mixing all three primary colors until you find the hue you want. This mixing technique produces more dimension, with blue, red, and yellow undertones.

Use the white of the paper as much as possible. It's hard to add white back into a painting, so you must either paint around the areas you want to keep white or use masking fluid.

White watercolor, if used at all, should be used sparingly or only for certain techniques. A perfect instance for using white paint is when you want a color to be opaque, or less see-through. You can add white to any color to achieve this, and adding it to black hues creates lovely, opaque, cloudy grays.

Use masking fluid (see pages 56-59) to maintain perfect whites, while using other hues freely.

White watercolor helps make the perfect opaque gray for this moon.

Use white watercolor straight from the tube, without adding water, to apply smaller details.

# MARK-MAKING & BRUSHSTROKES

## UNDERSTANDING

# BRUSHSTROKES

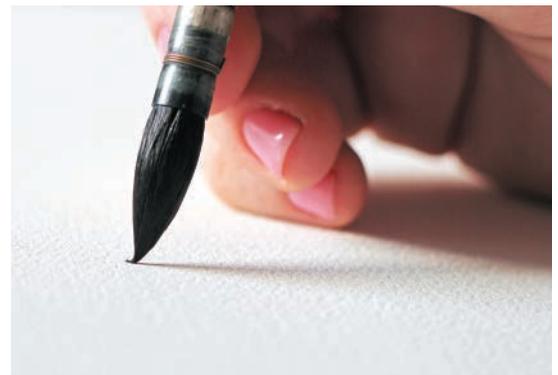

Mark-making is the creation of shapes, textures, patterns, and lines to make art. In watercolor painting, there are many kinds of paintbrushes you can use to make marks. Each brush has a purpose and produces a different brushstroke. Let's explore some of the ways to use brushes for mark-making and the different marks brushes can make!

These are the brushes we'll use to explore creating brushstrokes. I use each of these brushes daily for art projects, and they can be used together for a variety of mark-making applications.

To create full brushstrokes, apply pressure on the brush to press the full body of the bristles against the paper.

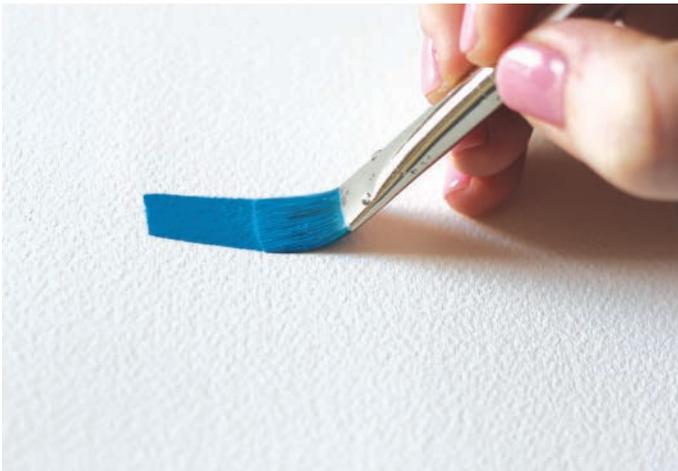

To create thin brushstrokes, apply light pressure on the brush to touch just the tip of the bristles to the paper.

Load the mop brush with paint, and use light pressure to press the full body of the brush onto the paper. Isn't that brushstroke beautiful?

Now, using just the tip of the mop brush, apply barely any pressure to create a very thin line. The contrast between the strokes is amazing!

Load a flat brush with paint, and use light pressure to press the body of the brush to the paper. A flat brush makes a beautiful hard-edged stroke in comparison to the soft round stroke the mop brush creates.

The flat brush also creates beautiful, thin lines when you use just the tip of the bristles.

The way you grip the brush also has a major impact on your brushstrokes. Check out the examples below to see how adjusting your grip changes the way you use the brush.

Use a low grip on the brush to paint precise details. Finger stability near the bristles gives you more control.

Use a higher grip to paint more freely and flowing. This grip doesn't provide the same amount of stability and is perfect for loose painting.

Every brush, whether you use the tip or the body, can create a wide variety of marks. In this example, I used three different brushes: a flat, a round, and a rigger. Each of these brushes can be used to make many kinds of marks. Imagine how these marks might be used in your artwork.

The flat brush produces very geometrical and angular shapes with choppy, thin lines. The round brush creates smooth, curvy shapes with an overall sense of looseness. The rigger brush is perfect for forming long, continuous lines and can also be used for texture by applying pressure on the full body of the brush.

**SPOTTER** Use spotters and other small brushes for detail work on paintings both large and small. Since the bristles are short, these tips don't flex easily. That stiffness is great for making small, precise lines.

**ROUND** I use round brushes the most, because they are so versatile. You can paint anything, from loose backgrounds to lines and details to flowers, buildings, and shapes.

**FLAT WASH** I use flat wash brushes for covering large areas with paint. This is a great brush to use when painting the sky or laying down a base color over a large area.

**RIGGER** The rigger brush is perfect for long, smooth lines. The long bristles drag with looseness, making it the perfect tool for painting stems, poles, string, lines, and grass.

**MOP** My mop brush is probably my favorite brush. It has loose bristles that make it easy to paint free-flowing botanicals and greenery, while also maintaining a sharp point for fine lines.

**FLAT** The flat brush is perfect for creating hard lines and geometric shapes. I most often use it for doors, windows, and bricks.

# LETTERS

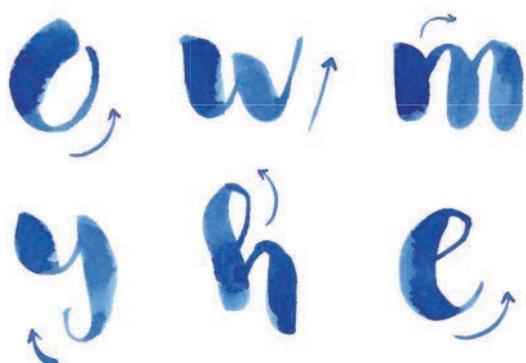

The basic brushstroke principles also apply to watercolor lettering. You can use the body of the brush, as well as the tip, and will utilize pressure in the brushstrokes. I love creating letters and phrases with watercolor, because it gives the lettering character and texture.

I prefer to use a water brush when creating watercolor letters. This is my favorite tool because it has a super-pointed tip that's perfect for fine lines but can also be pressed down for thicker brushstrokes.

upstrokes

downstrokes

In lettering there are upstrokes and downstrokes. Downstrokes are thick, and upstrokes are thin. You can use what you've learned about brushstrokes to explore creating downstrokes and upstrokes in the letters.

Press down on the full body of the bristles to create thick lines. These are the downstrokes of the letters.

Use the tip of the bristles for thin lines. These are the upstrokes of the letters.

Practice making thick downstrokes with the body of the brush and light upstrokes with the tip. Then try putting them together by making a continuous, smooth transition from downstroke to upstroke to downstroke again. The letter “W” is perfect for practicing this exercise.

Next practice curvy letters like “O.” As you reach the bottom of the thick downstroke, transition to a thin upstroke on your way back to complete the letter.

There are many different lettering styles to explore while creating watercolor letters. Paper choice also plays a part in the look of your lettering. Rough, cold-pressed paper yields a very textured look. Smooth, hot-pressed paper yields a smooth, clean look. Both styles are great and work well for a variety of projects.

These are examples of lettering on rough, cold-pressed watercolor paper.

These are examples of lettering on smooth, hot-pressed watercolor paper.

Practice painting the word “water” using a cursive font on smooth, hot-pressed watercolor paper. If you like, you can sketch out the lettering in pencil before painting. Be mindful of whether you are painting an upstroke or downstroke, and adjust your pressure accordingly.

The page features a central white area with the title 'SHAPES & PATTERNS' in black and grey text. On the left and right sides, there are vertical decorative borders consisting of horizontal watercolor stripes in various colors including green, teal, orange, purple, and blue, with white spaces between the stripes.

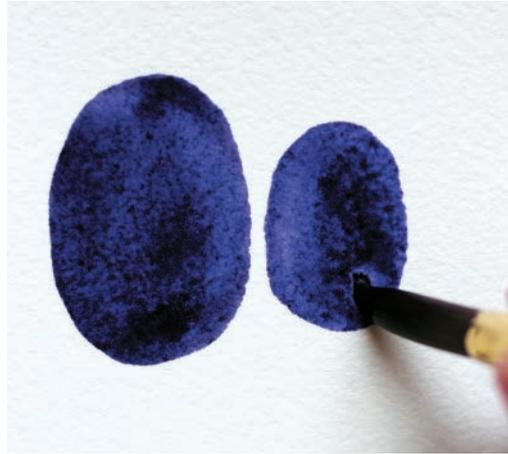

# SHAPES & PATTERNS

# CIRCLES & OVALS

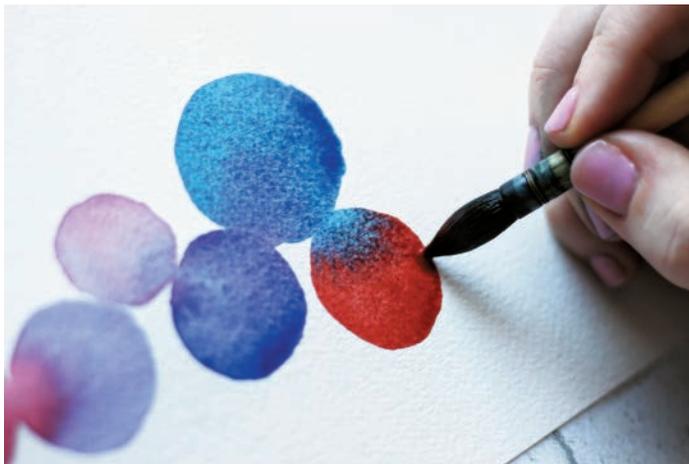

Circles and ovals seem basic, but they can be tricky to master. I find it easiest to paint the outline first, and then fill it in with a round brush.

With a little practice, you'll find that you can paint near-perfect circles.

Circles and ovals are found everywhere in patterns and nature. Having a basic knowledge of this shape will give you the foundation needed to paint them in real-life pieces.

Try painting circles to warm up before beginning a new painting, or to get familiar with a new paintbrush.

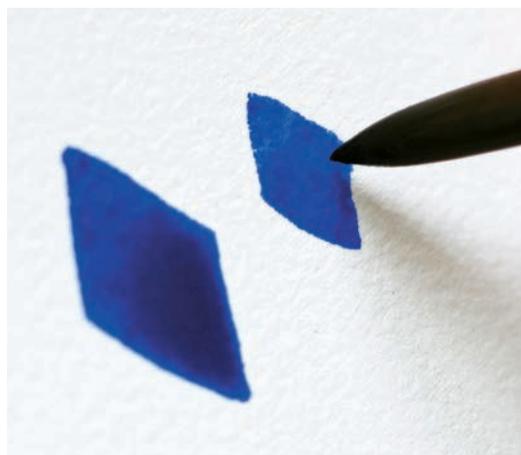

# TRIANGLES & DIAMONDS

Triangles and diamonds may be more angular than circles, but they are also easier to paint if you draw the outline of the shape first and then fill it in.

Use a round brush to paint triangles and diamonds.

Triangles and diamonds are common shapes in geometric patterns and in more structured objects, such as buildings.

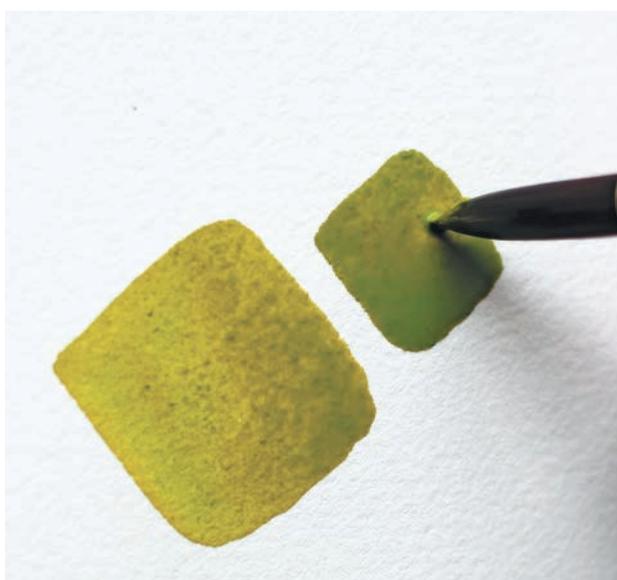

Paint triangles to practice painting straight, crisp lines with your round brushes.

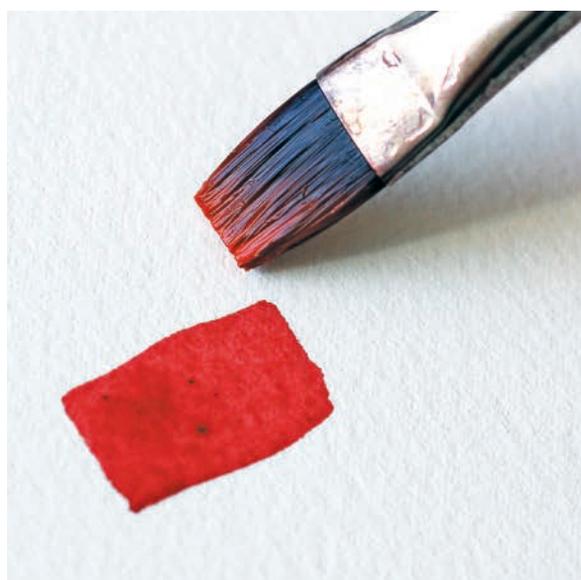

# SQUARES & RECTANGLES

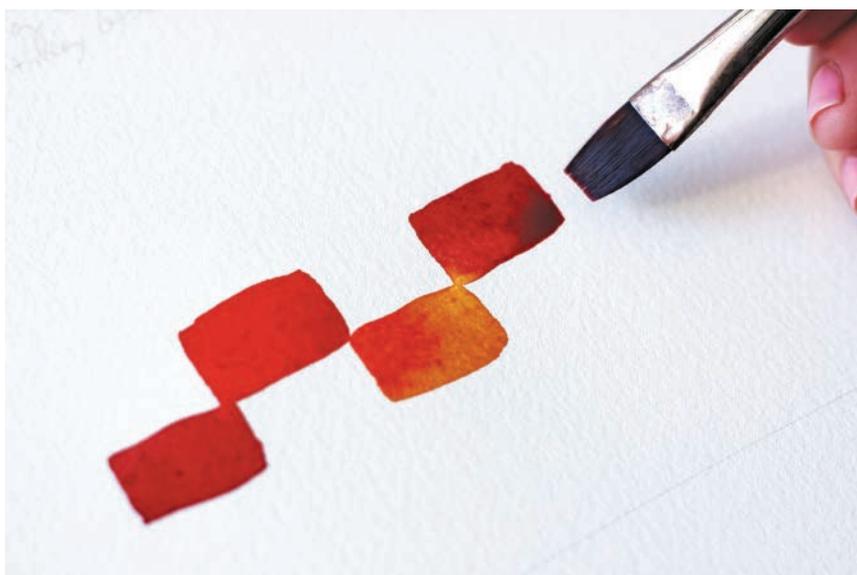

It's easy to form squares and rectangles with a flat brush. Short strokes make squares, and longer strokes make rectangles. You can also use a round brush to draw the outline of the shape and fill it in.

Using a round brush will produce softer corners.

A flat brush will produce sharper corners.

Squares and rectangles are very uniform. You can spot these geometric shapes in all kinds of structures, buildings, and even in nature.

OTHER

# SHAPES

Other shapes, such as hearts, stars, and abstract shapes, are fun to paint—and they are open-ended for unique approaches and interpretation.

Paint hearts by pressing down on a round brush to create each arch.

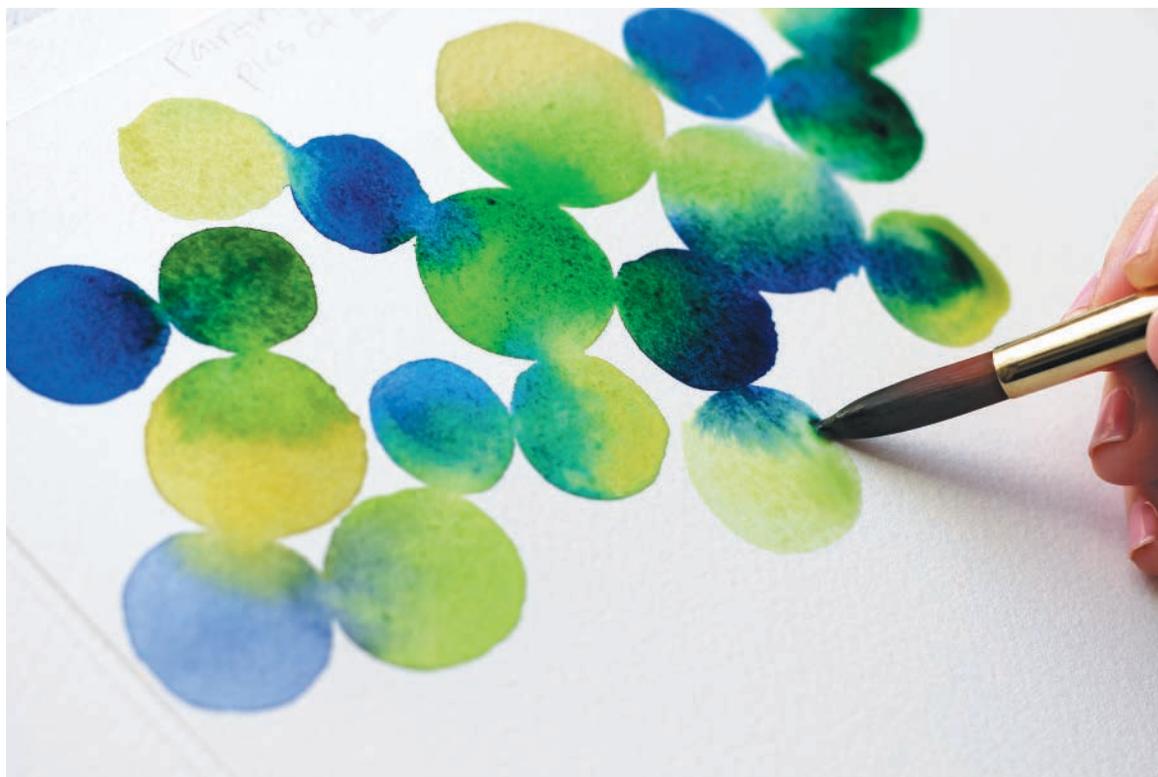

Stars are hard to form freehand, so I suggest creating a crisscross star and filling it in for a more uniform look.

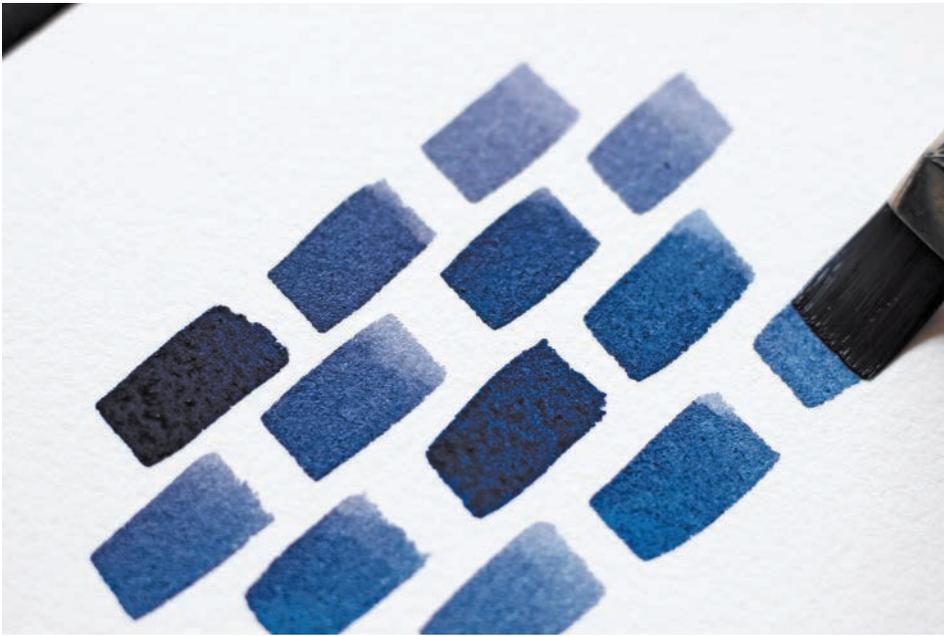

Anything goes when painting abstract shapes. Dots, lines, ovals, drops—whatever inspires you to create. Although abstract can be seen as “random,” a lot of thought should go into the placement and flow of each shape.

# ALLOVER PATTERNS

To take your skills to the next level, try creating some all-over patterns using all the different shapes. You can combine shapes for a fun mixed pattern, or stick to one or two shapes for a more consistent look.

The page features decorative vertical borders on both the left and right sides. These borders consist of horizontal stripes of various colors, including shades of green, teal, blue, orange, and purple, rendered in a soft, watercolor style. The central area of the page is plain white.

# RESIST TECHNIQUES

# MASKING FLUID

Masking fluid is one of my favorite materials. It allows you to create unique patterns and keeps the whites of your paper white!

## ARTIST'S TIP

Choose a masking fluid that is removable and has slight color so you can see it when you apply.

## USING MASKING FLUID

Masking fluid is easy to use—just follow the tips on this page!

Apply masking fluid with a paintbrush. You'll want to use separate paintbrushes for masking fluid and painting, as masking fluid is tough on the bristles.

Allow the fluid to dry. Then apply paint.

### MASKING FLUID TIPS

- Try not to lay on masking fluid too thick. A thin, even layer is perfect. The thicker the layer, the longer it will take to dry.
- Do not paint over masking fluid until it is completely dry.
- Allow paint to dry completely before removing masking fluid.
- Use your finger or an eraser to lightly remove the masking fluid.

Allow the paint to dry. Then gently peel the masking fluid off.

Masking fluid is a great tool to keep your whites white. Because watercolor is a fluid medium, it's hard to completely control. Use masking fluid to protect pieces of the paper in your work where you don't want any paint.

Apply masking fluid just like you would paint. If need be, you can use pencil to lightly sketch your design first.

Paint over the masking fluid with the colors of your choice, and allow the paint to dry thoroughly.

Peel off the masking fluid gently to reveal the design.

You can also use masking fluid to maintain color that you've already applied.

After you have applied paint, allow it to dry before applying masking fluid to the areas you want to protect.

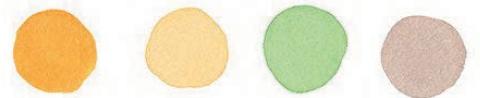

Once the masking fluid is dry, you can apply paint over it.

Gently peel off the masking fluid. The original color is preserved!

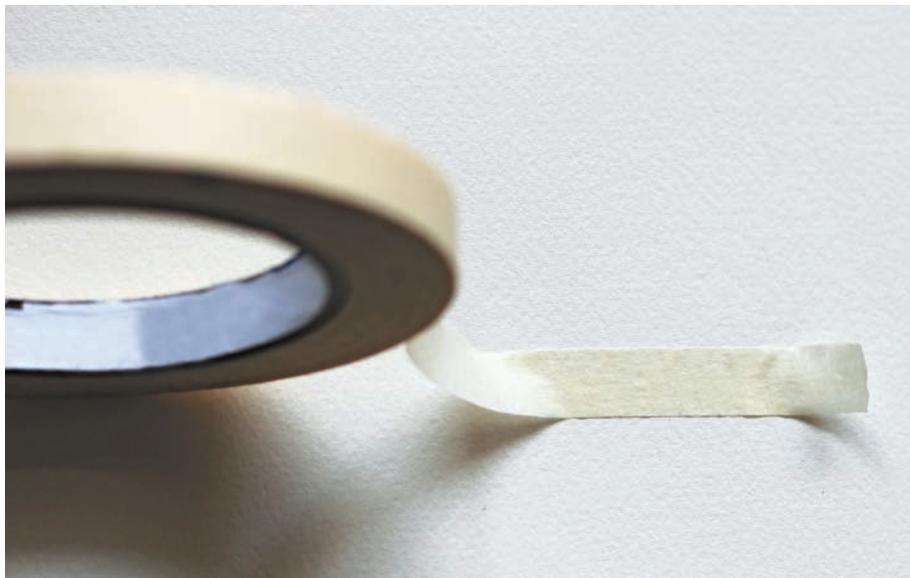

This is a great layering technique to build texture.

# MASKING TAPE

Artist's masking tape is ideal for creating sharp lines. You can use it to create perfect lines for horizons, geometric shapes, patterns, and more.

## USING MASKING TAPE

Apply the masking tape. Be sure to press it down tightly to prevent paint from leaking underneath.

Paint over the tape, and allow the paint to dry thoroughly.

Once the paint is dry, gently peel off the masking tape at an angle to avoid tearing the paper.

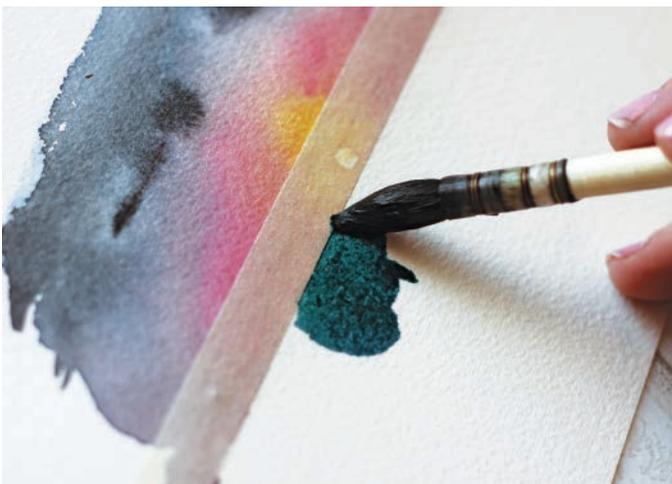

Here's how you can use the masking tape technique to get a crisp horizon line in a landscape painting.

Place a strip of masking tape down where the horizon line is. Then paint the sky or background above the tape, bringing the paint all the way down to the tape.

Let the paint dry before gently peeling off the masking tape.

Reapply a new piece of masking tape, aligning the bottom edge of the tape with the horizon line. Then paint the bottom half of the scene.

When the paint is dry, gently peel away the masking tape to reveal your beautiful landscape!

Masking tape is also perfect for painting geometric patterns. Here's just one example. You can follow along, or you can experiment with creating your own patterns.

Apply strips of tape to create a pattern. I've created an asymmetrical grid.

Paint over the pattern with the colors of your choice.

Allow the paint to dry completely before peeling off the tape.

The result is perfect geometric shapes with crisp, even lines.

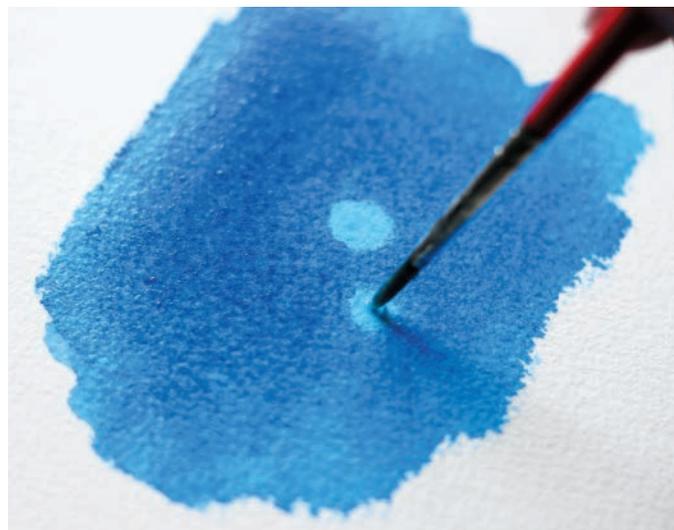

# OTHER RESIST TECHNIQUES

You can also use alcohol to create unique texture. Alcohol pushes the paint away, creating white shapes. You can use regular rubbing alcohol for this technique. It works best when the paint is still a bit wet.

First apply paint to the watercolor paper.

Use a paintbrush to apply alcohol to the paint while it is still wet.

The result is subtler than masking fluid or tape, producing soft, feathery markings.

Another way to create resist texture is to use salt on a wet wash. The salt gathers some of the pigment, creating a starry effect.

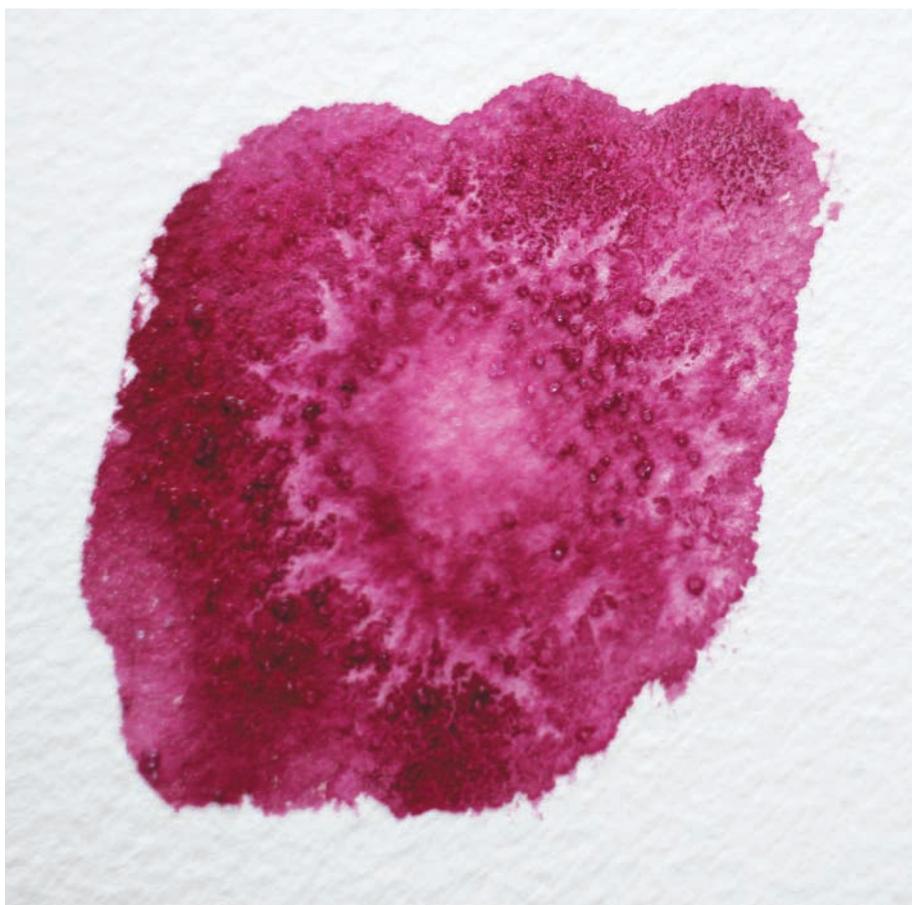

Start by laying down a watercolor wash.

Allow the paint to dry just slightly, and then sprinkle salt over the still-wet wash.

Allow the paint to dry, and then brush off the salt. The size of the salt grains and the wetness of the paper will affect the look.

You can also use white crayon to create a wax resist technique. Water and wax don't mix. When you draw with the crayon on paper first, the paint will bead up on the wax.

Draw on watercolor paper with a white crayon. I've just drawn some simple shapes.

Apply paint over the wax.

As you paint, you'll see that the shapes or design you drew in crayon remain free of paint.

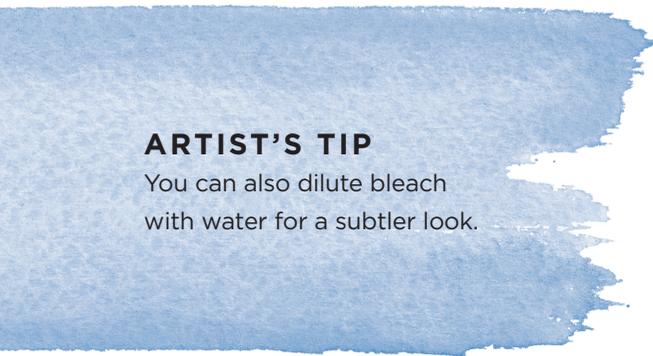

While you can't "erase" watercolor paint, it is possible to lift some of the paint off the paper. One way to achieve this is by using bleach. Be sure to use synthetic paintbrushes when working with bleach. Bleach is caustic and will ruin natural-hair brushes.

First lay down a wash of watercolor paint.

After the paint dries, load a brush with bleach and brush it onto the wash.

**ARTIST'S TIP**

You can also dilute bleach with water for a subtler look.

The bleach reactivates the paint and lifts it off the surface.

I used masking fluid to paint this pretty wild cacti pattern.

# PAINTING BOTANICALS

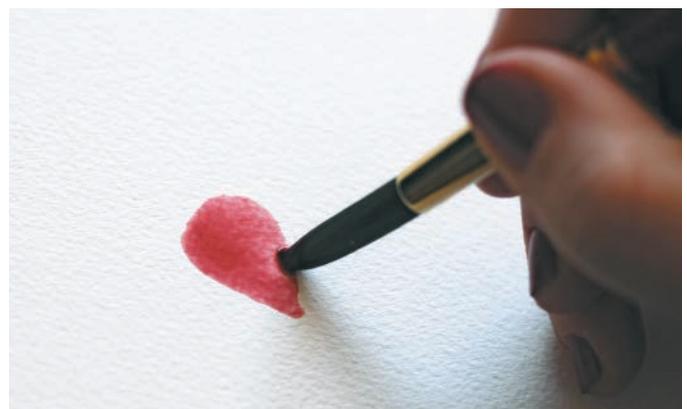

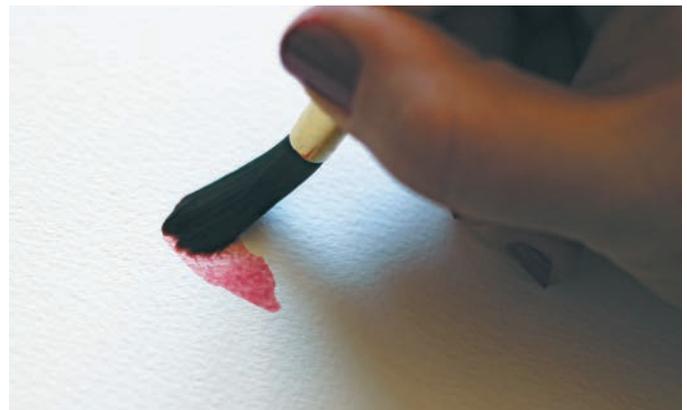

# FLOWERS

Flowers come in all shapes, sizes, colors, and textures. Some may seem easier to paint than others, but with the tips in this section, I'll show you how to paint all kinds of flowers—with a little bit of practice, you'll be able to paint all your favorite florals.

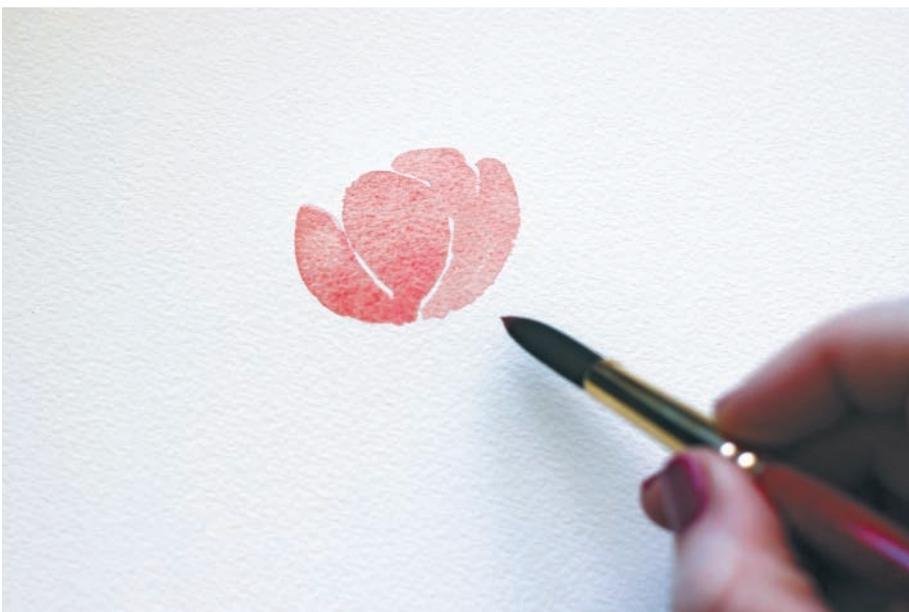

Shown here is an example of a variety of petal shapes. Note how they vary, in both shape and size. Petals can be pointed, round, square, jagged, etc. Use the body of the brush for the round edges and the tip of the brush for pointed edges.

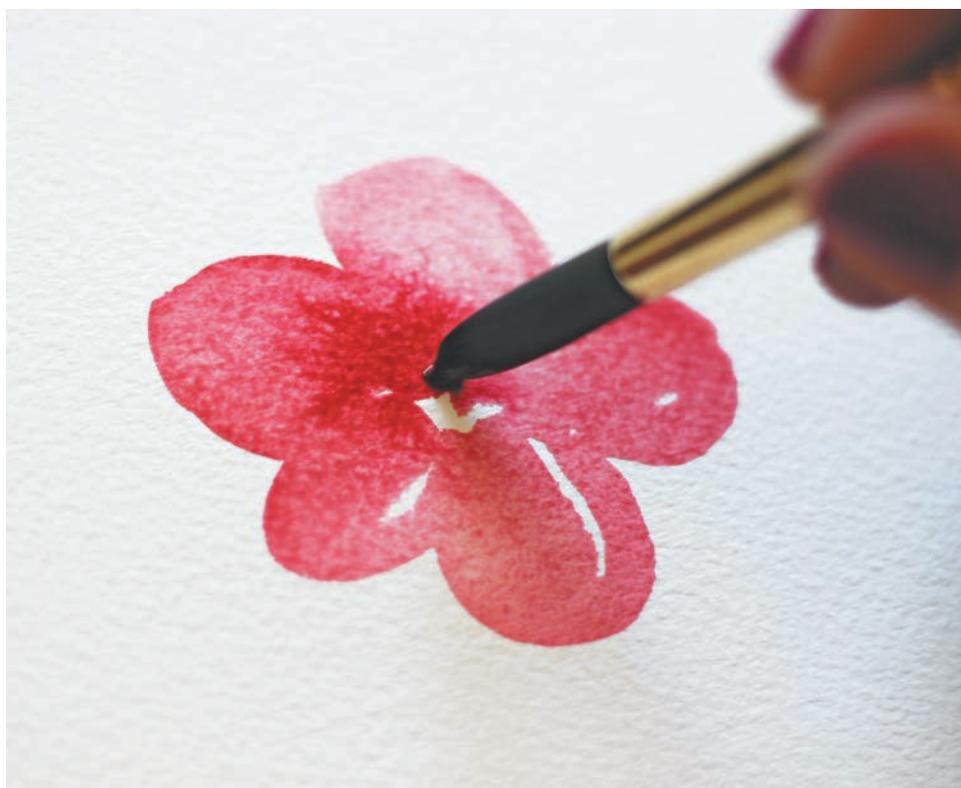

Flower petals come together at the stem. As you paint them, think of a cone, with the petals fanning out from the center and coming back.

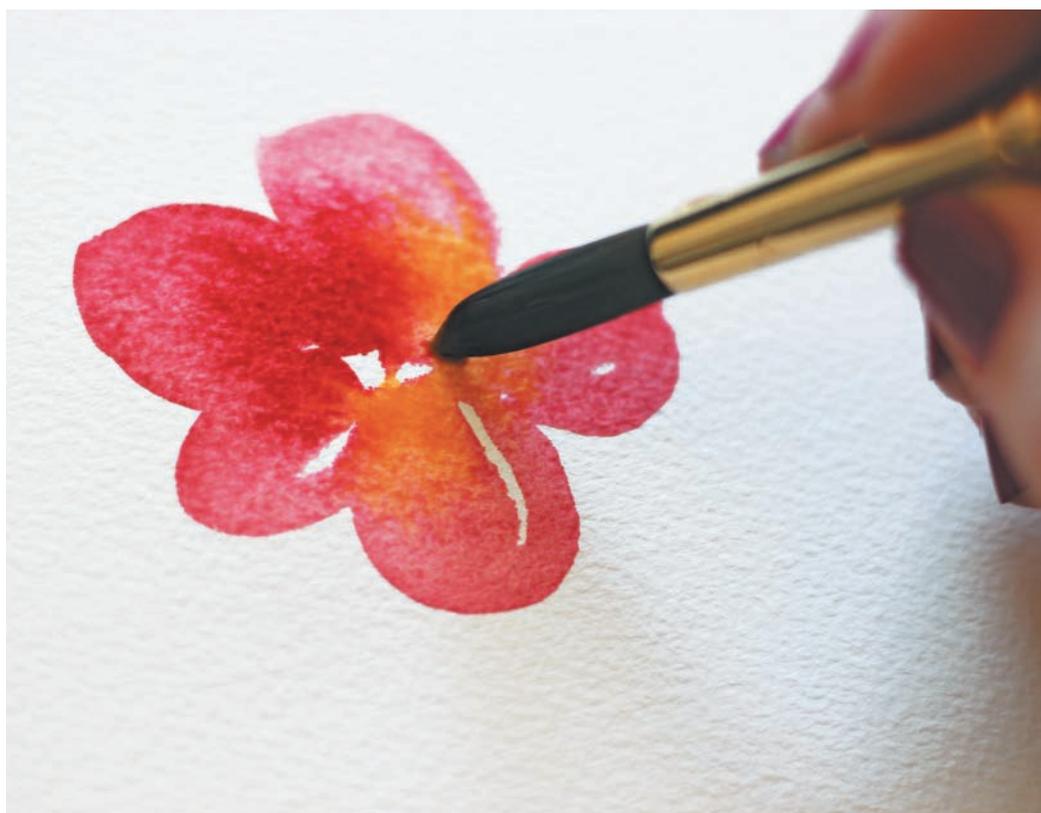

The illustrations on this page demonstrate how to think of a flower as a cone. Practice this exercise a few times to warm up!

Add interest and contrast to a flower by adding the same pigment in a darker value (shown above), or by adding a different pigment (shown at right).

For some flowers, such as sunflowers, you will paint the center first and then create the petals around the middle.

For other flowers, such as peonies, you'll paint the flower first, and then add the center detail, either wet-on-wet or wet-on-dry.

## PEONIES & OTHER FLOWERS WITH LOTS OF PETALS

Remember that a flower is like a cone, and all petals point toward the center. Use the body of the paintbrush to make the curvy tops of the petals and the tip of the brush to bring the petal to a point. Use light and dark values to create variety and depth, and add upper layers of petals with a lighter wash. You can create bleeding by adding the yellow center while the pink paint is still wet for a unique look, or you can allow the petals to dry before adding the center.

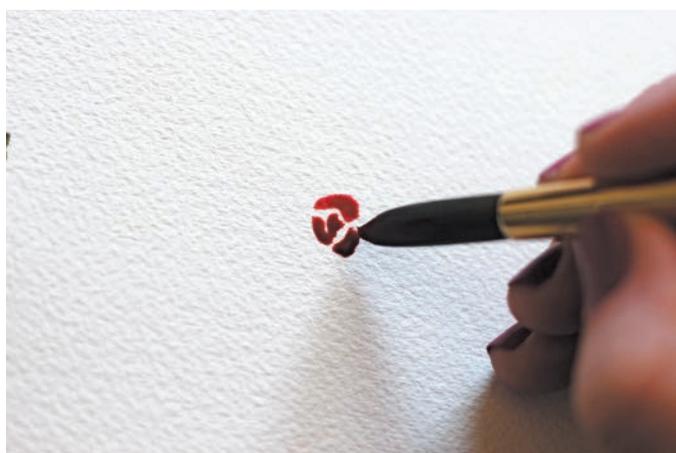

Follow the steps on the next page to paint a perfect peony! ►

# ROSES & OTHER TIGHT-PETALED FLOWERS

When painting a rose, start with a small center circle and three lines around it. Create curved shapes that are more voluminous on one side. Coordinate the petals so that the layers adjacent to one other don't match up. Continue adding layers until the flower is the size you want.

## ARTIST'S TIP

As you move out from the center, use less pigment and more water to create depth.

## OPEN FLOWERS

For open flowers, such as cosmos and pansies, paint one petal at a time until you reach the desired shape. Mix up the sizes of the petals for a lifelike look, and leave some white space in between for definition and to create the illusion of separation. Add more pigment to create interest and diversity in the petal color.

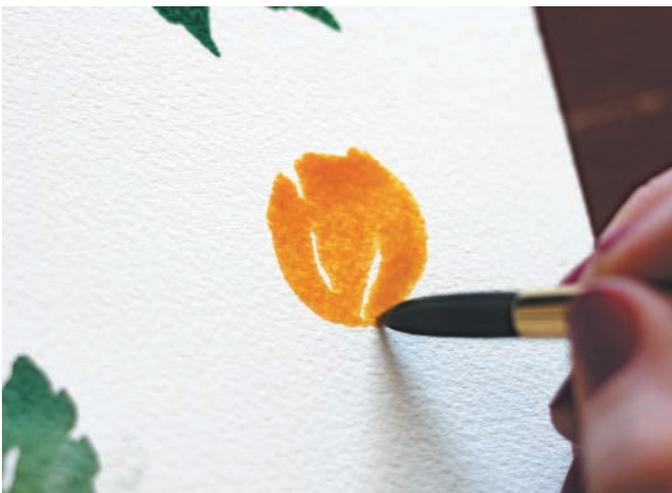

## CLOSED FLOWERS

Some flowers, such as tulips, are more naturally closed, and the centers are not visible from the side. Paint the petals straight up and slightly curved inward. Create separation of petals with white space or lighter and darker paint values.

# SMALL FLOWERS

Some flowers are very small, and there is no need for petal definition or centers. Adding greenery helps define small flowers as a bunch. This is a good technique for painting flowers like hydrangeas or lilacs.

Smaller flowers are usually found in bunches. Create interest by adding flowers that overlap and layer.

### ARTIST'S TIP

Letting the green paint bleed into the flower is a fun technique I use often to create variety and interest. Don't be afraid to let the colors mingle and bleed into each other!

# GREENERY...

Although not as obviously varied as the vast array of colorful flowers, greenery can be just as beautiful and comes in many shapes, sizes, and shades of beautiful greens. On the following pages, I'll demonstrate several easy and simple ways to paint lovely bits of greenery that you can add to your botanical paintings to create lush, full floral artwork.

## LEAF 1

Using the body of the brush, push upward to create the entire leaf.

When you have reached the desired length of the leaf, use lighter pressure to transition to the tip of the brush to create the leaf tip.

## LEAF 2

Imagining a line in the center, create a “C” shape with the body of the brush on one side.

Repeat on the other side.

Use light pressure at the top to form the tip of the leaf.

### LEAF 3

Use the body of the brush to create volume.

Paint long strokes for long leaves. Leaving the middle of the leaf white creates the illusion of a center line and defines the leaf.

### LEAF 4

Use the body of the brush and a long stroke to create slender, elongated leaves.

Remember to decrease the pressure on the brush as you near the end of the leaf to taper the stroke.

To create depth on leaves with no center line, apply darker color at the top or bottom—or both! This can suggest shadow, as well as new growth.

**LEAF 5**

Use the tip of the brush to paint leaves with jagged or rough edges.

**LEAF 6**

Use the body of the brush to create smooth, round leaves.

#### **FOLIAGE 1**

For short-leaved foliage, create the stem first. Then use the body of the brush to paint short leaves growing from smaller stems.

#### **FOLIAGE 2**

Follow the same process to paint long-leaved foliage. Create the stem first, and then use the body of the brush to paint voluminous, long leaves growing from smaller stems.

#### **FOLIAGE 3**

For needled foliage, use light pressure to make quick strokes outward from the stem with the brush tip.

#### **FOLIAGE 4**

Make long strokes for longer needles. For rounded needle tips, start away from the center and bring the point of the brush to the stem.

**FOLIAGE 5**

Stems and random shapes perfectly capture the look of scattered greens, such as weeds.

**FOLIAGE 6**

When painting grass, create long thin lines while altering the direction in which they point.

**CACTI** Long lines with white space in between perfectly capture the spines on a saguaro cactus.

# ADDING GREENERY TO FLOWERS

For long leaves, use long strokes. Vary the pressure on the brush to create thickness and thinness.

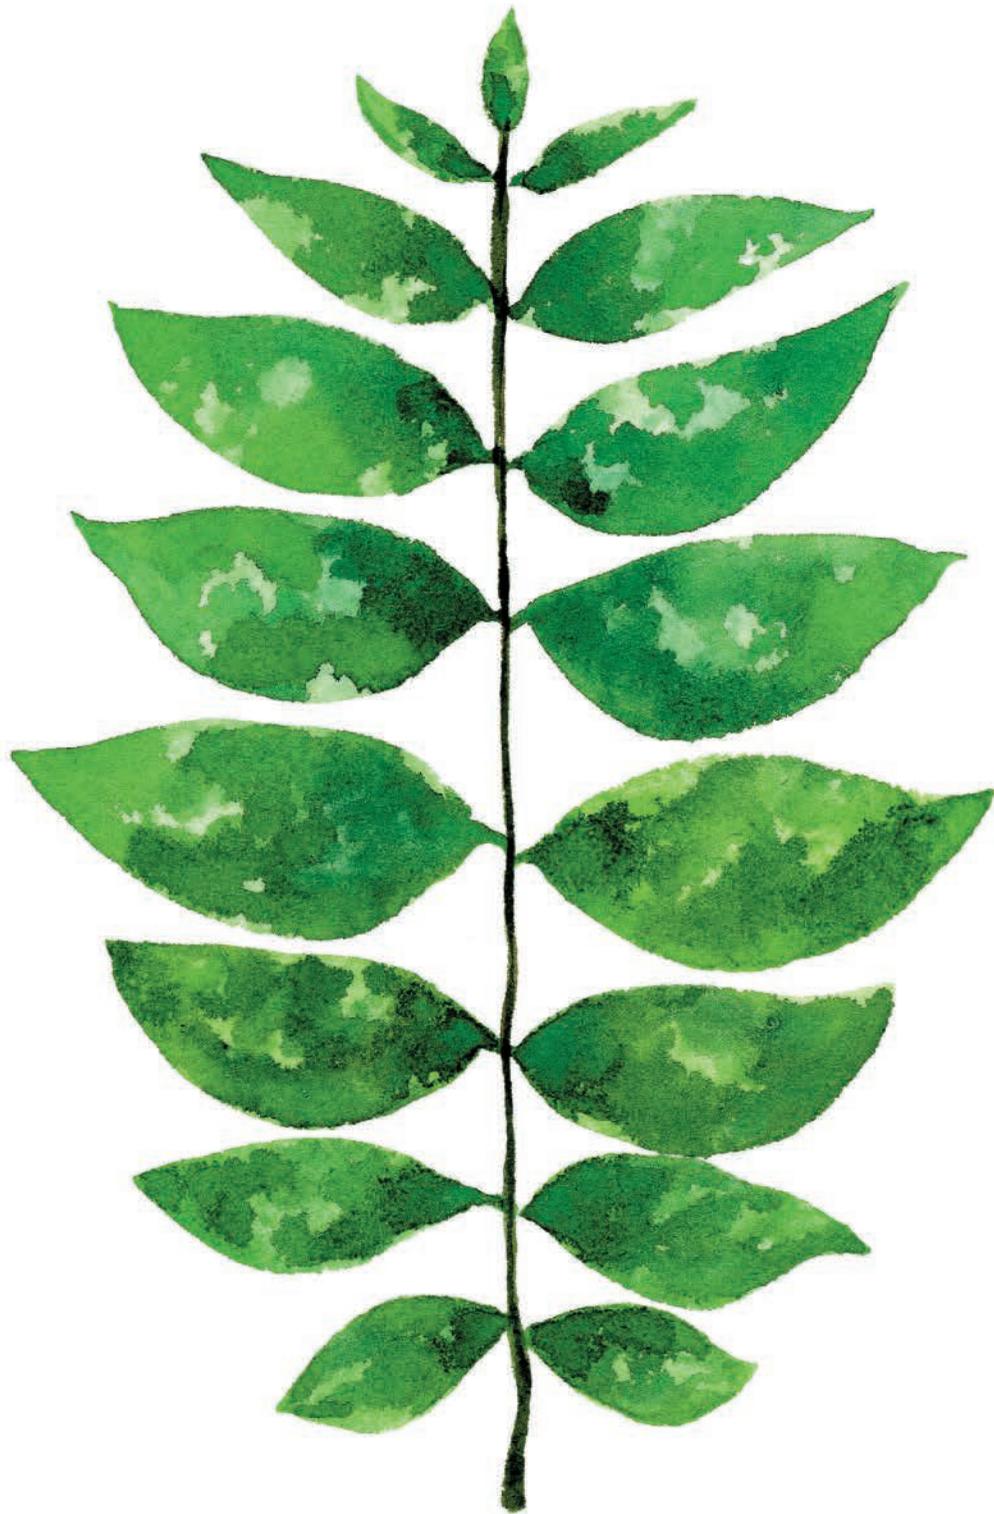

Keeping the center white defines the shape and structure of the leaf.

Use the “C” shape on both sides of the center, bringing the leaf to a point.

You can use the same brush to create both large and small leaves. Use the body for large leaves, and the tip for small leaves.

# WREATHS

Wreaths are fun and easy to paint. They make very pretty, simple standalone art. They can also be used as frames for watercolor lettering, an initial, or a monogram!

Start with the “bones” of the wreath—the stems.

Begin placing leaves with a medium-light color value.

Continue adding leaves, alternating on each side of the stem.

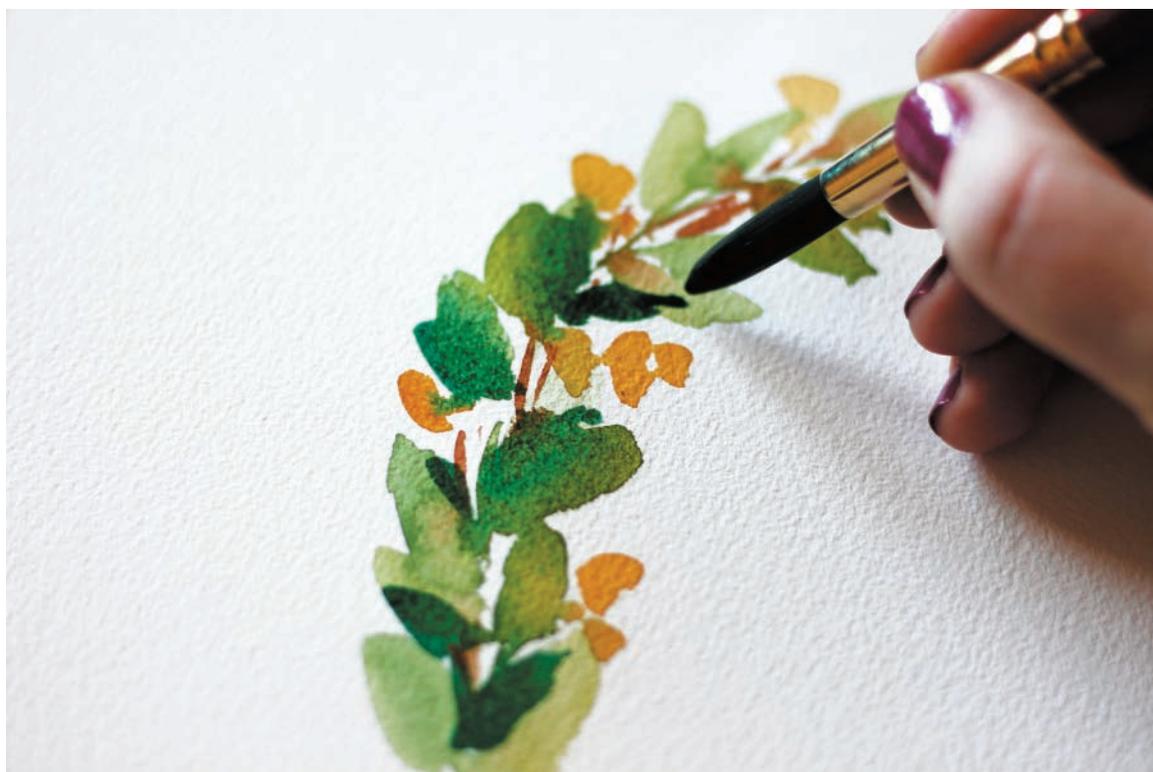

Next add another color hue. Use either a darker shade of the first color or another hue for variation and contrast.

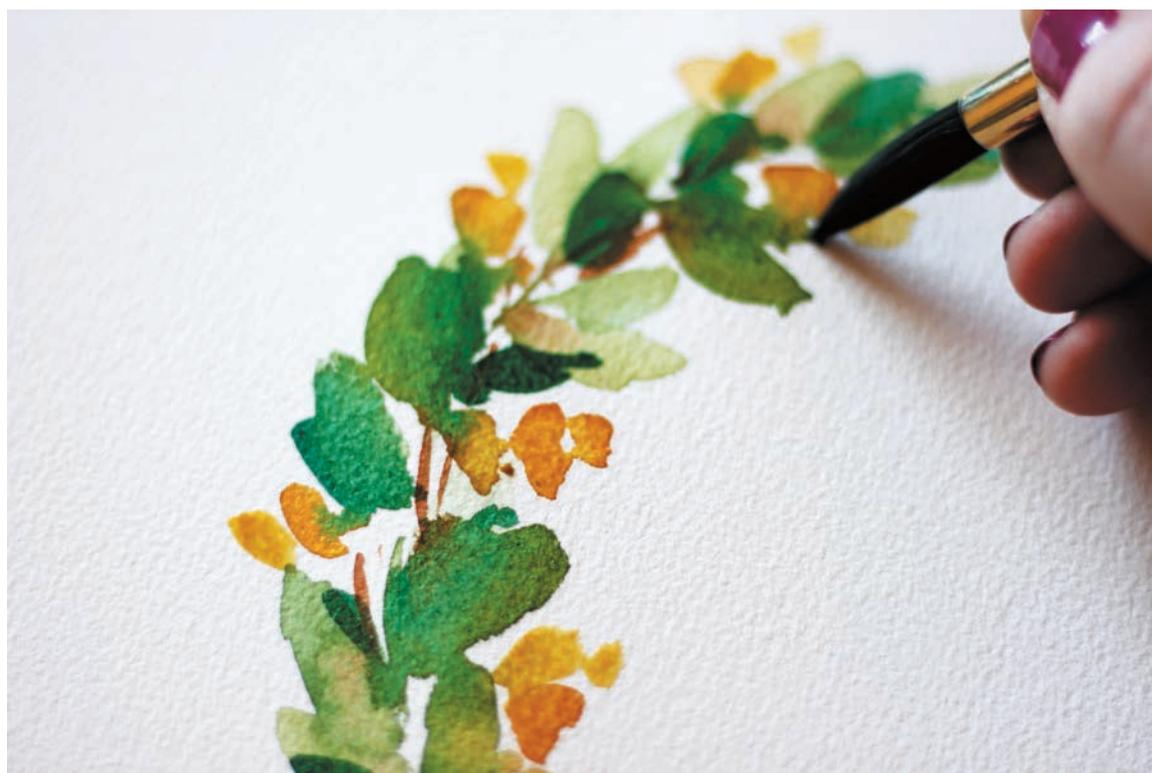

Add a highly contrasting color for balance. This red-brown is the complementary color of green and tones down the green hues while providing interest.

Add flowers to the wreath.

Add even darker greenery for contrast.

Here are a couple more examples of finished wreaths. You can paint all kinds of wreaths—floral, branches, and pine.

# FLORAL PATTERNS ●●●

Once you've mastered painting botanicals, try piecing them together to create pretty patterns.

Start with the focus of the pattern. Here I began with pink peonies. Scatter them in whatever way is pleasing to you and fulfills the point of the pattern.

Paint the first layer of leaves or foliage. This is the base color for the pattern—not too light and not too dark.

Add a secondary floral to support to the main floral. It should be different in shape, and ideally different in color.

Add darker leaves. This will be the darkest value in the pattern. Add enough leaves to create high contrast with the rest of the elements, but not so many that it overwhelms the flow.

Add a textured element, such as grass or weeds—something with movement that isn't as uniform. This will break up the pattern and keep it from looking too stiff.

Once everything is dry, add another element in a very light wash. Overlap the different elements to connect them together. This last step isn't necessary, but it usually gives the pattern a feeling of completion.

Turn the page to see  
more examples of  
finished floral patterns! ▶

The page features decorative vertical borders on both the left and right sides. These borders consist of horizontal stripes of various colors, including shades of green, teal, blue, purple, orange, and light blue, rendered in a soft, watercolor style. The central area of the page is plain white.

# PAINTING ANIMALS, LANDSCAPES & MORE

# ANIMALS

Animals make great subject matter for watercolor painting. You don't need to add a lot of detail to paint your favorite critters. Just start with a quick pencil sketch, and then use simple strokes and add a few fine details—the human eye fills in the rest.

## FOX

Apply a light wash of orange watercolor paint evenly on dry paper, leaving the white parts of the fur unpainted. While the paint is wet, drop in bright yellow, red, and orange to create interest and variety.

Paint fur details on the white areas with light gray paint to add depth. Don't overdo it—you only need to create the impression of fur, not paint each individual hair.

Use black paint for the nose and mouth, eyes, whiskers, and inner ear hair detail. Paint the tips of the ears black. Dilute black paint with water to lighten, and add a shadow under the chin to add dimension, as well as a few strokes in the chest fur.

Add another layer of orange over the fox's fur to give it a fuller, textured appearance. Use brown paint to add shadows inside the ears.

# SQUIRREL

Apply a light brown wash of watercolor across the body, leaving the white of the paper for the white fur. Leave a few small unpainted areas in the brown fur for highlights.

Squirrel tails are darker at the center, and lighter at the edges—an important observation, since you need to start with the lighter color first. Use light, sweeping strokes, going out from the body of the squirrel.

Progressively add darker and darker browns until you are satisfied with the darkest hue. Remember that you can't add back white or lighter tones, so add dark colors sparingly.

Use black to paint the nose, mouth, and whiskers, as well as the eyes and a few dark accents. Paint gray details and shadows on the white fur. For added texture, apply another layer of color over the brown fur.

# CHICKEN

Start by painting the red areas on the chicken's head. Leave small areas of white for highlights. Use a small detail brush to paint small strokes in the direction of the feathers. This breed has long black-and-white neck feathers. Leave lots of white space for the white feathers.

Paint small scallop shapes on the breast and wings. Define the wings from the body by making the feathers slightly longer and going in a linear direction. Paint the leg feathers darker and closer together, showing less white. Use long, tapering strokes to paint the feathers at the tip of the wing.

Finish off the feathers along the tail, fanning them out. Add details to the feet, beak, and eyes.

# PIG

Start by painting an initial light layer of pink watercolor over the pig's body.

Add a more concentrated pink shade to the ears and nose to create dimension. Add another layer of light pink to the body for texture and depth.

Add detail to the nose, eye, and hoofs. Create wrinkle lines around the eyes and nose with a slightly darker pink. Just a few lines will do the trick!

# DOG

First paint tiny eyebrows and a touch of brown on the sides of the face. Then paint the black body, applying the paint unevenly and in layers to mimic the texture of dog fur. Leave white areas of fur unpainted.

Bring black into the chest to define the edges of the white fur, making light, sweeping brushstrokes from the black paint into the chest.

Add nose, mouth, and eye details. Use light gray paint to define the white fur at the mouth and chest.

Be sure to use a lighter wash of black to paint the dog's rear right leg, which is further back than the other three legs. Darker paint colors appear to come "forward" on the page, while lighter colors appear to "recede." This is an important concept to understand about suggesting distance.

# CAT

Paint patches of orange watercolor to start the cat's fur. This cat also has patches of white fur, so keep a lot of white space for contrast.

Add more defined patches and stripes by adding a darker orange shade. Remember that you can't add white and light colors back in, so be light-handed when adding darker colors.

Add nose, mouth, whiskers, and eye details. Apply darker brown fur to define the legs, head, ears, and tail. Then use light gray paint to define areas of the white fur.

Notice how my illustration of a cat is truly nothing more than some simple brushstrokes and variation in color value to create depth. You don't need to consider yourself an artist to work with watercolor paints. Anyone can create simple paintings!

# RABBIT

Start by painting the rabbit's ears and working down the body. The fur is very textured; use patchy, thin strokes.

Rabbit fur has a lot of dimension and color. Use different shades of gray and brown to achieve the look, leaving any white areas unpainted. Paint the thin fur strokes in the direction of growth.

Paint the body of the rabbit in downward patchy strokes, leaving white space for highlights and definition. The center of the body is light, but not white. Use very watered-down paint.

Add nose, mouth, whisker, and eye details. Use light gray to define the white and light areas of fur.

# BEETLE

Start by painting the beetle with an even shade of blue-green paint, leaving white highlights.

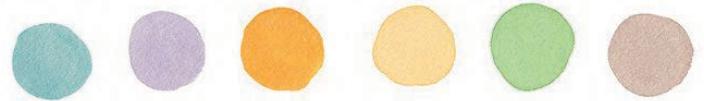

Add black to the upper sections of the beetle, bringing some of it down into the reflection on the shell. Paint thin, uneven lines on the shell to define the pattern, following the natural curve of the shell.

Paint the legs. Using uneven strokes on the end sections creates texture without adding too much intricate detail.

When painting the antennae, use quick strokes for a textured look. Start with small strokes, making them progressively larger toward the tip.

# BUTTERFLY

Start with the base layer of watercolor paint. Use different shades of orange and yellow for interest.

While the wings dry, paint the leaves, flowers, or branch. You should paint this early on so that it can dry before you paint the butterfly's body and legs.

Add line detail on the wings with black paint, using light pressure for the thin strokes and heavy pressure for the thick strokes.

Paint the body, legs, and antennae. Leave white space on the body for highlights.

# ELEPHANT

Start by painting a light gray color across the elephant's ear, leaving white space in the appropriate places, such as inside the ear, for highlights.

Drop in different shades of gray and blue while the paint is wet, working somewhat quickly so that an area doesn't dry before you can paint the whole of a section.

Add darker grays and blues for shadow and definition under the neck, the bottom of the trunk, and in wrinkled areas.

Add wrinkles on the trunk and around the eye and body. Don't overdo it with wrinkle lines—just a few will create the idea of wrinkly, textured skin. Add eye detail and shadowing under the neck and tusks.

# LION

Start by painting the face light orange. Don't forget to leave the lighter areas of fur unpainted. Bring the orange paint into the mane. Make light strokes from the face outward to look like fur.

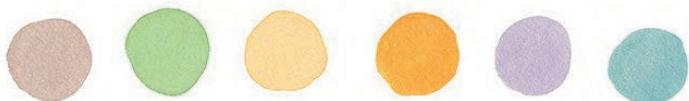

Add the dark layers of fur using chocolate brown paint. Make light strokes from just above the orange hairline growing outward. This makes it look like the orange hairs mix with the brown hairs where they meet. Leave white space for definition and highlights.

Drop in more orange paint in the mane, using a shade that is slightly darker than the face.

Paint the eyes, nose, and mouth. Define the ears and the hair detail around and inside them. Add light patches of brown for the texture on the lion's face and a darker brown to define the outline of the face against the mane.

# FACES

Painting portraits can be challenging, but it's possible to create whimsical faces that capture the essence of the person. Just like with animals, a few well-placed strokes and details go a long way. Take a peek at the examples below and follow the tips as you practice painting faces.

Mix pale skin colors with small amounts of yellow, red, and brown until you reach the right pigment—this face has a pink undertone.

Mix dark skin colors with brown, red, and green. The green helps balance the mix so that it isn't too red.

For thick, curly hair like this, leave sporadic areas of white space to define the curls.

To create a pale skin tone that has a golden undertone, combine yellow, red, and brown, but use more yellow.

This dark skin color mix of brown, red, and green contains a bit more red to create the reddish undertone. For men, use very light color to paint the lips.

For bald heads, be sure to define the shape of the head proportionally.

Like pale skin tones, light brown or tan skin is also a mix of yellow, red, and brown. Add small amounts of paint until you reach the right pigment. The yellow paint will help prevent the color from getting too dark.

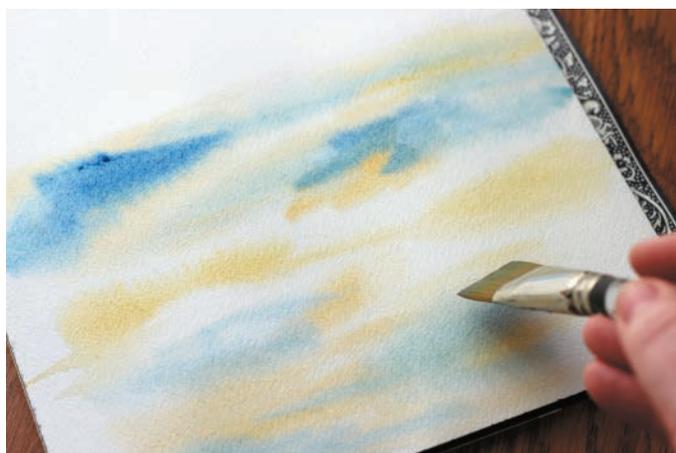

To create a very pale skin color mix, combine yellow, red, and brown as usual, but make the mixture very watered down.

# ABSTRACT LANDSCAPES

Abstract landscapes are easy to paint, and there's no pressure to achieve realism. Simply paint the shapes and colors you see, and let the paint work its magic.

## LAKESIDE

To paint this pretty lakeside scene, start by brushing plain water over the entire sheet of watercolor paper. While the paper is wet, drop in sporadic areas of yellow and blue watercolor paint. Be sure to leave some white space. Allow the colors to bleed together.

Allow the paint and paper to dry. Then start dabbing green watercolor paint along the horizon line.

Begin adding multiple shades of green and other colors to create a natural, interesting appearance. Use a fan brush to create texture and give the impression of leafy bushes and trees.

Bring color down along the side of the page to create the shoreline. Use light horizontal strokes, pulling into what will be the water. This will give the impression that the land juts into the lake and isn't an even, perfect border.

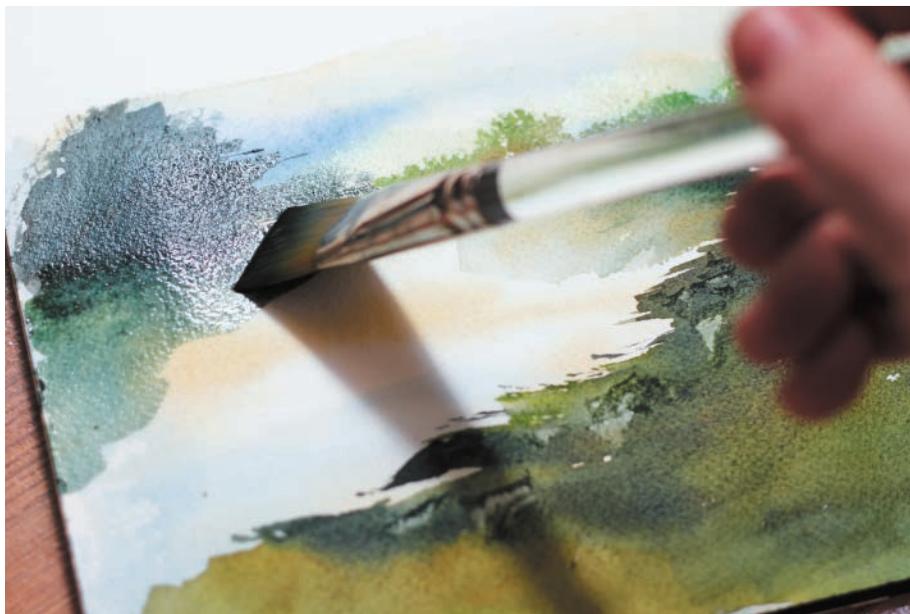

Continue to sweep color along the page, using a variety of earthy, natural colors.

When you reach the edge of the desired shoreline on the other side of the page, stop and look over your work to ensure you've added all the colors you want before the paint dries. Here you can see how I blended some of the color at the top beyond the waterline to create blurred shadows in the water.

Add the other shoreline, creating texture and the impression of large trees.

Dampen your brush with water and pull down some of the color into the water to create reflected shadows.

Add light horizontal lines along the water to create movement and texture. Add any finishing details to complete the piece.

# SUNSET

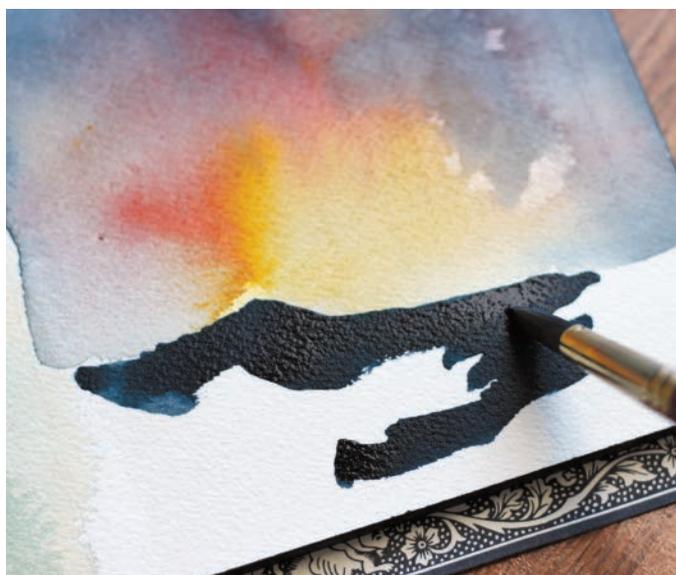

Paint the upper two-thirds of the paper with plain water. Then apply a highly concentrated area of bright yellow watercolor paint in the lower end of the wet section of paper. Apply reds and oranges at the top of and around the yellow paint, allowing the colors to blend together.

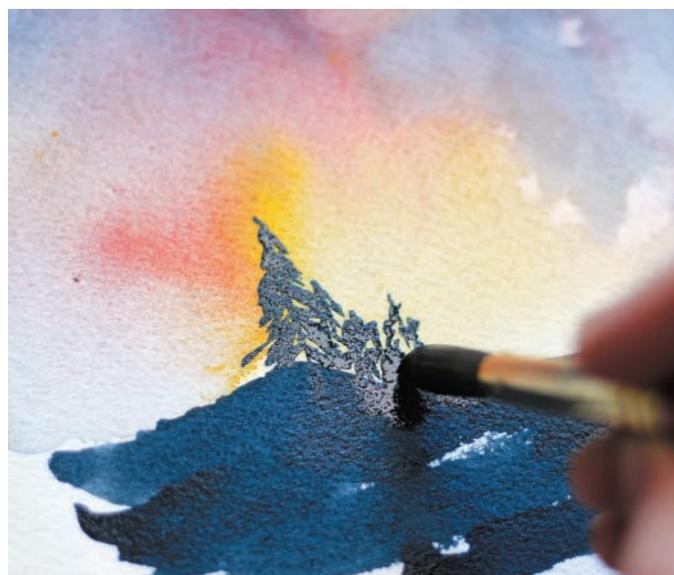

Add dark blues, blacks, and purples at and above the red and orange paint. Allow the colors to softly blend, while still maintaining the red color.

Before the paper dries completely, lightly dab some of the paint away with a paper towel to create texture and movement in the night sky. If needed, you can apply diluted paint over the dabbed areas to bring back a little more color.

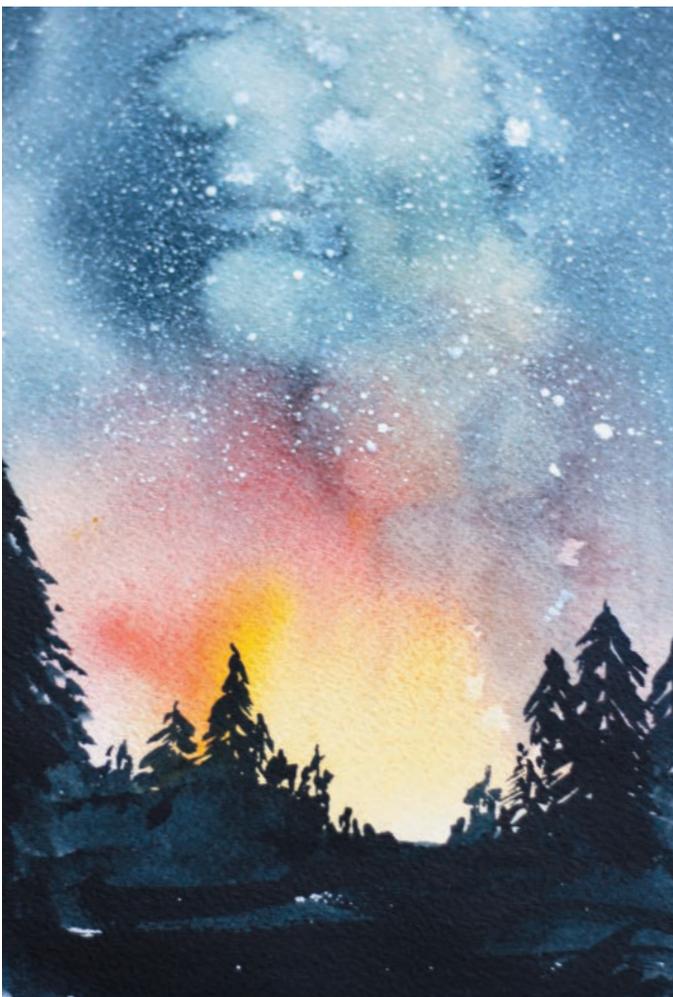

Allow the paint to dry completely. Then begin painting the horizon, using dark blue and black paints.

Begin to add mountains and trees against the colorful sky.

As you paint the trees, keep in mind that they should be more textured at the outer branches and very dense near the trunk. Paint the trees at different sizes to create depth.

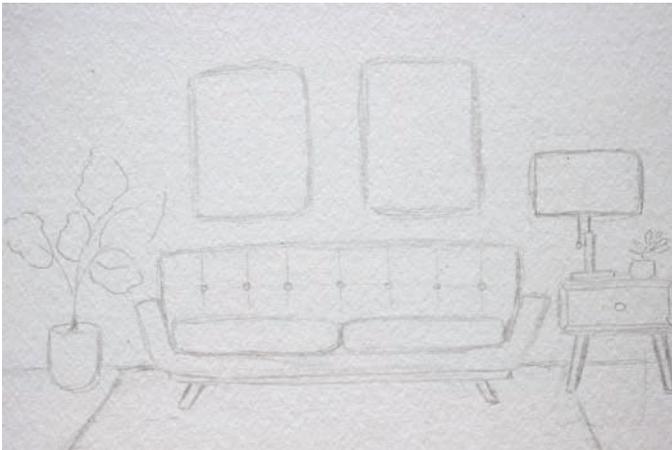

To create stars, dip a flat brush or toothbrush into white ink. Flick the ink onto the paper using your thumb. Be sure to cover the dark trees with paper to keep them free of white dots!

You can use these simple steps and techniques to paint endless beautiful sunset scenes. Try creating a glittering city skyline next!

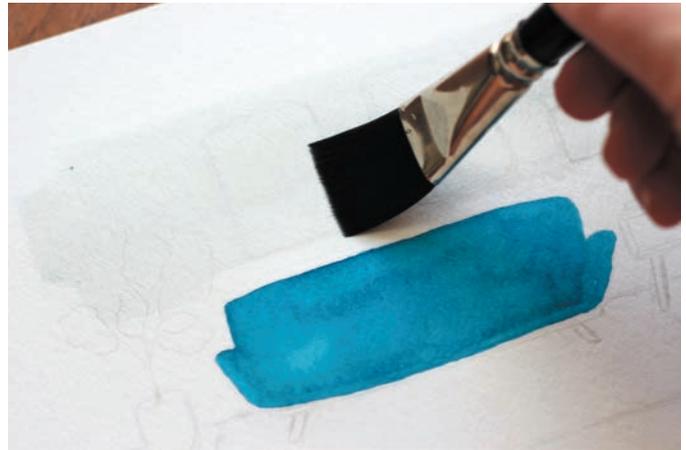

# INTERIORS

Painting rooms and interiors can be so much fun! You can paint the rooms in your own home, or you can paint scenes from memorable places from your travels or childhood.

## MID-CENTURY MODERN LIVING ROOM

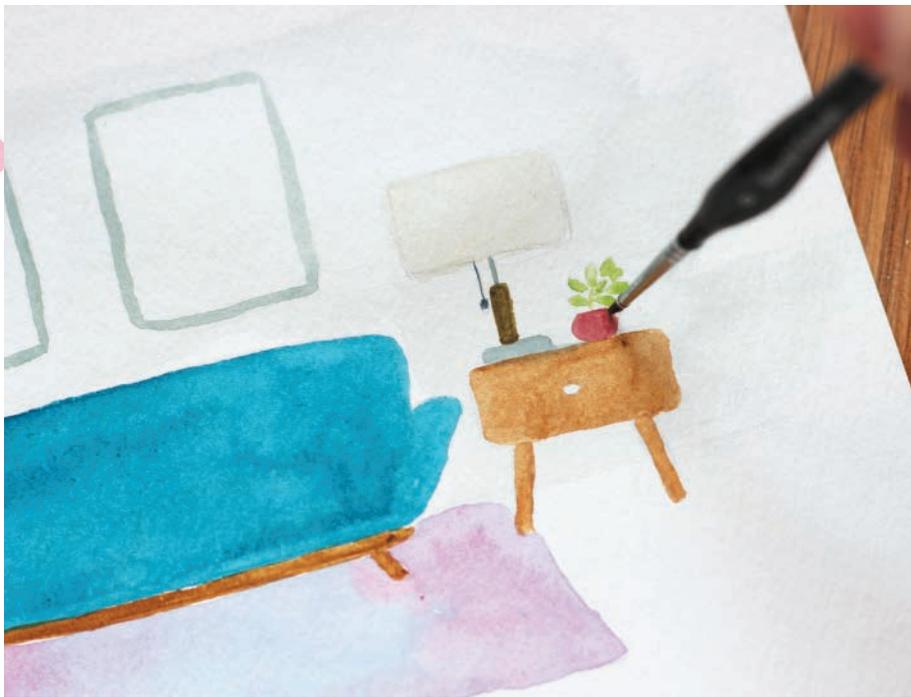

Start by planning the interior with a sketch to ensure the proportions and perspective are accurate.

Begin painting the objects in the room with a flat base of color. I started with the blue couch. For this room, I wanted a light gray wall, so I painted that before moving on to the other elements.

Continue painting the other objects in the room. As you work, allow areas of paint to dry before painting other parts that touch to avoid blending colors. For example, let the paint on the couch dry before painting the wood frame and legs. For the rug, I blended multiple colors together for a vintage look.

Begin painting a base color on all the smaller objects in the room, such as the lamp. Then add plants and greenery—my favorite part!

You can refer to the section on painting botanicals for tips on painting the greenery and flowers. (See pages 70–101.)

Create artwork for the wall.

Finish with details, such as lines and buttons on the couch for the tufting.

# COZY COTTAGE

Begin with a detailed sketch of the room.

Paint a base layer of color on the chair, and let it dry.

Paint the curtains with a light base color, leaving white space for highlights and definition.

Add color to the mantel and smaller objects on top. Then paint the bricks on the fireplace. To create the natural look of brick, vary the paint color slightly and make some strokes shorter on the edges to indicate smaller bricks. Paint the fire inside.

Paint the plant and its container, and add detail to the window and a branch outside.

Paint the chair legs, pillow, and blanket to add more color. Add stripes to the rug.

Paint the floor blanket, the lamp, and the frames on the wall.

Add all the finishing details, including the lines on the plaid blanket, a dark outline on the chair and floor lamp, and some darker strokes in the curtain and plant leaves to add dimension. Don't forget to add artwork to the frames. Do any of these pieces look familiar?

# ABOUT THE ARTIST

Kristin Van Leuven is a watercolor artist best known for her loose style and modern approach to painting. After trying different mediums, watercolor quickly became her favorite because of its unpredictable nature and blending ability. An Arizona native, she is inspired by nature and the beautiful desert around her. After many years of painting, she was encouraged by family to post her work on social media, where she found a supportive community that has helped her artwork and business succeed. She is blessed with a loving husband and two beautiful children, with one more on the way. When she isn't busy with family and artwork she loves to read books and be outside with her family. Visit [www.lovelypeople.bigcartel.com](http://www.lovelypeople.bigcartel.com) to see more of Kristin's artwork.

# MODERN WATERCOLOR

It's time to get your feet wet with watercolors! This dynamic and inspirational guide will set you down a path of exploration as you learn to play with this fun medium. In **Modern Watercolor**, you will discover how to harness watercolor's unique transparent qualities to create stunning works of art. From selecting your first watercolor paints to learning to blend colors into a unique palette, you'll find everything you need to know to develop your own rich, cohesive artwork. The easy-to-follow lessons inside will teach you how to paint everything from shapes and lettering to gorgeous botanicals, animals, and patterns—plus more! Whether you're an experienced artist seeking a playful escape or a beginner who has never held a paintbrush before, there's something for everyone in **Modern Watercolor**.
